Performance and status overview

The *Overview* is your central hub for understanding **the health and performance of your entire portfolio**. Instantly see if your systems are running smoothly or if any issues need attention.

Below the status section, key indicators summarise your portfolio's performance – from water consumption and costs to environmental impact and recent events.

It's the ideal starting point for every user: clear, intuitive, and designed to help you spot trends and make smarter decisions, faster.

All your properties, one view

The Sites page is your central place for **navigating between all properties** in your portfolio. It provides a clear list view that lets you quickly locate any site, check its status, and move directly to detailed insights when needed.

With intuitive search and filtering tools, you can easily find specific locations or group sites based on custom criteria – making portfolio management fast, organised, and effortless.
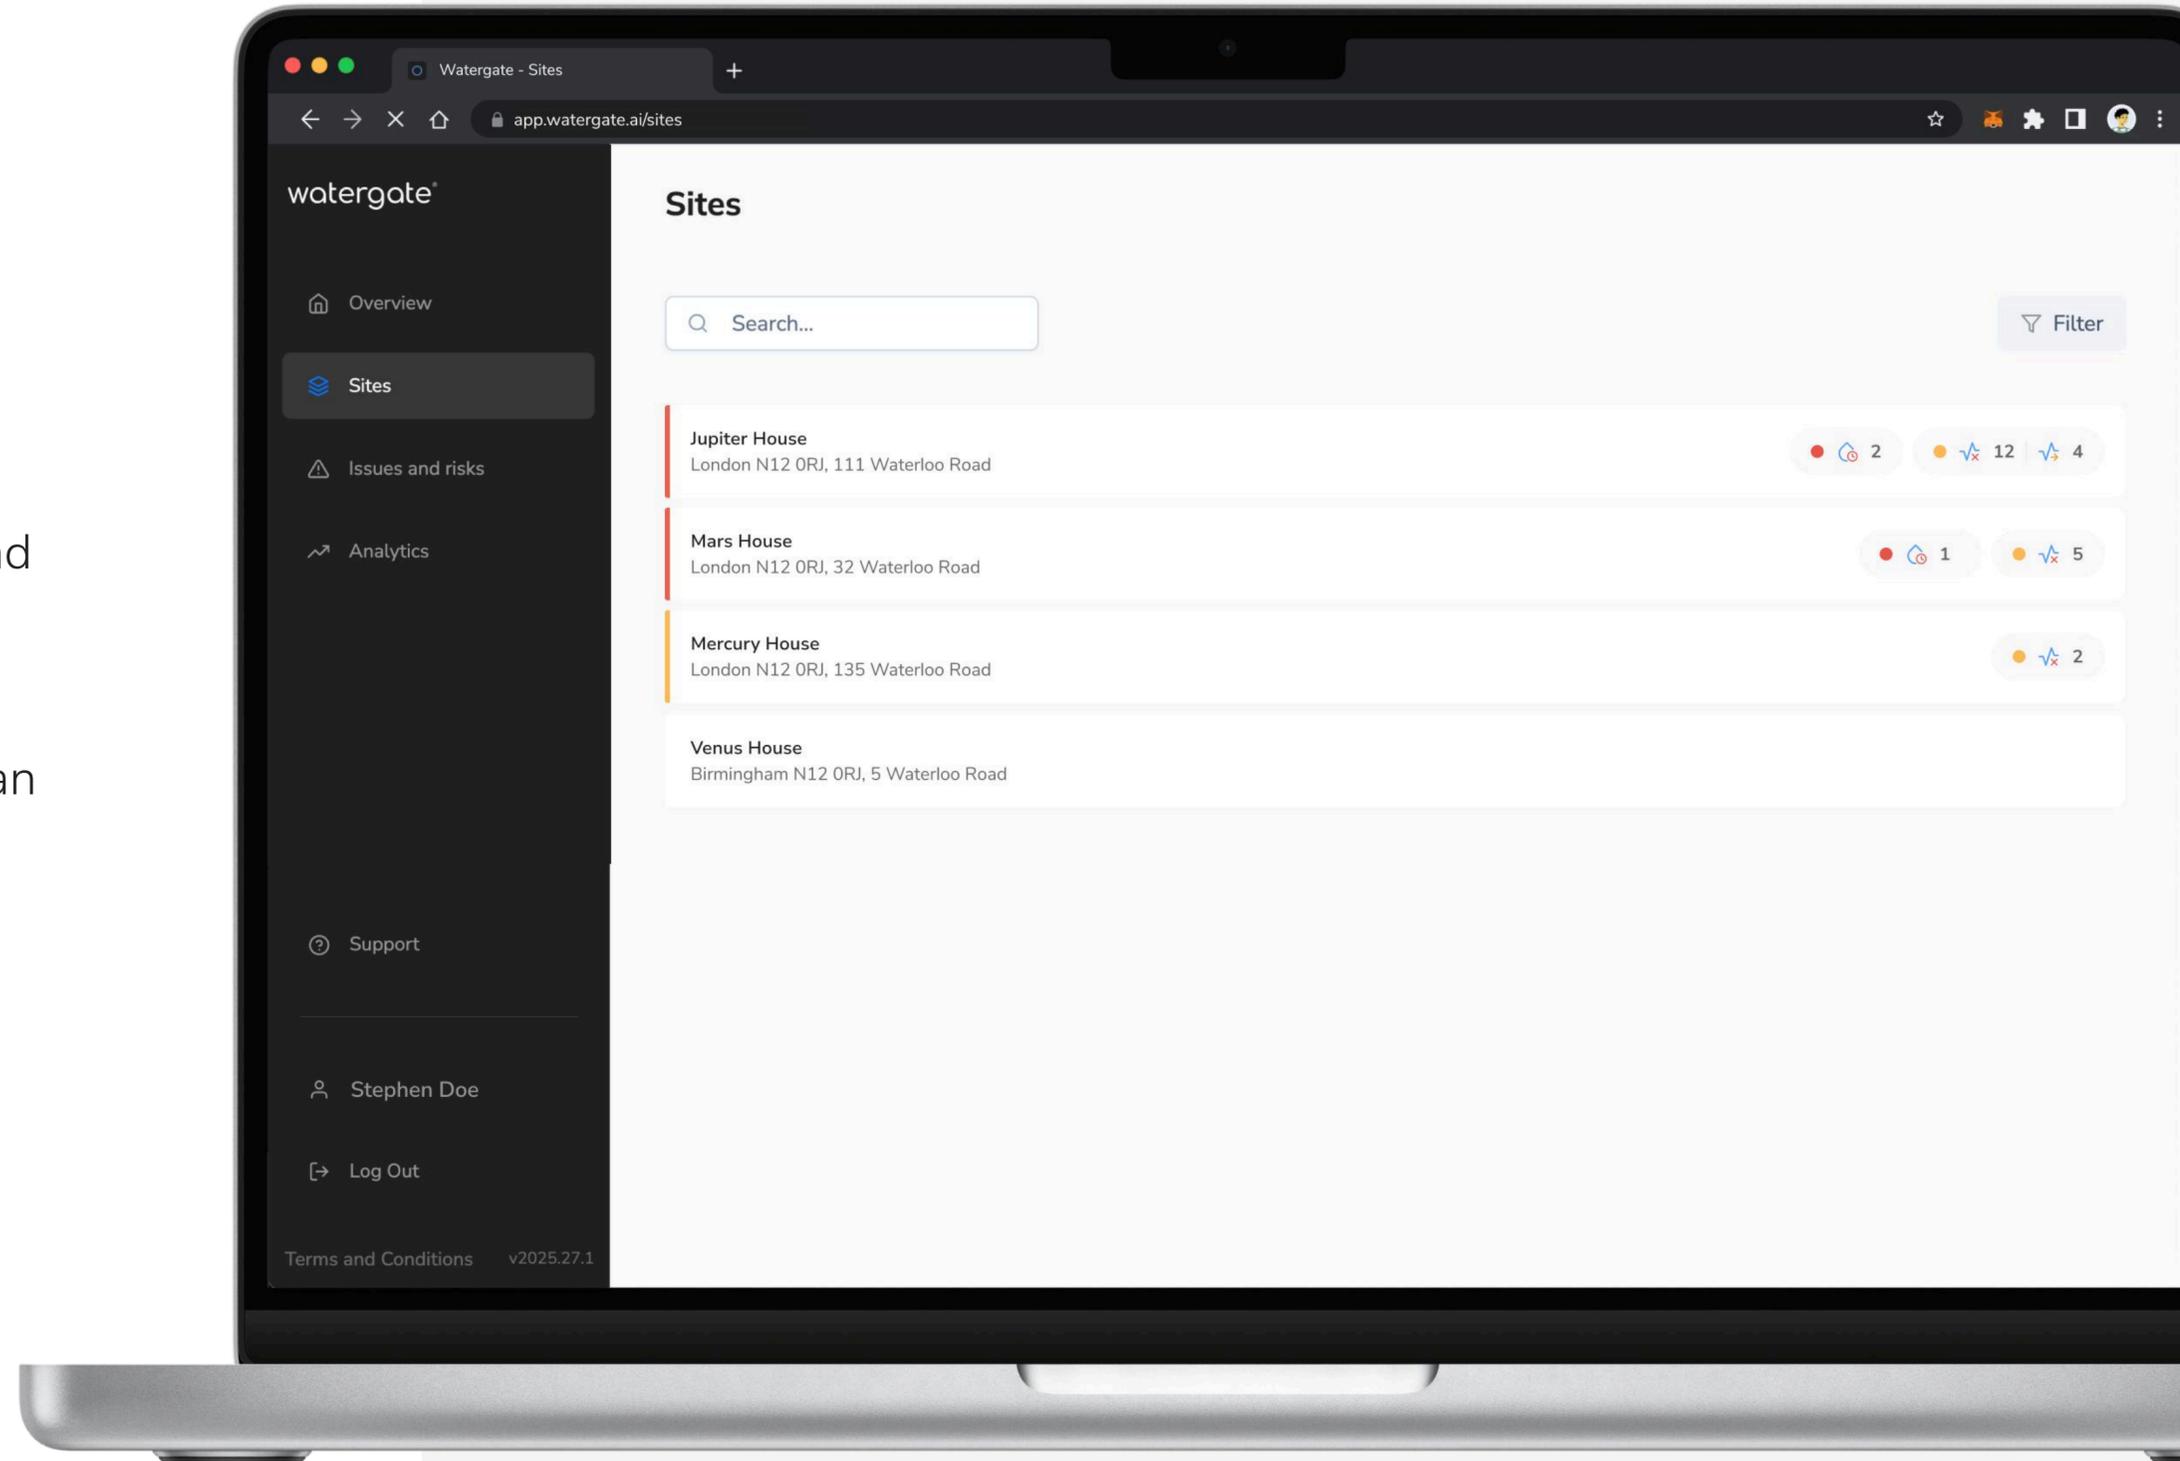

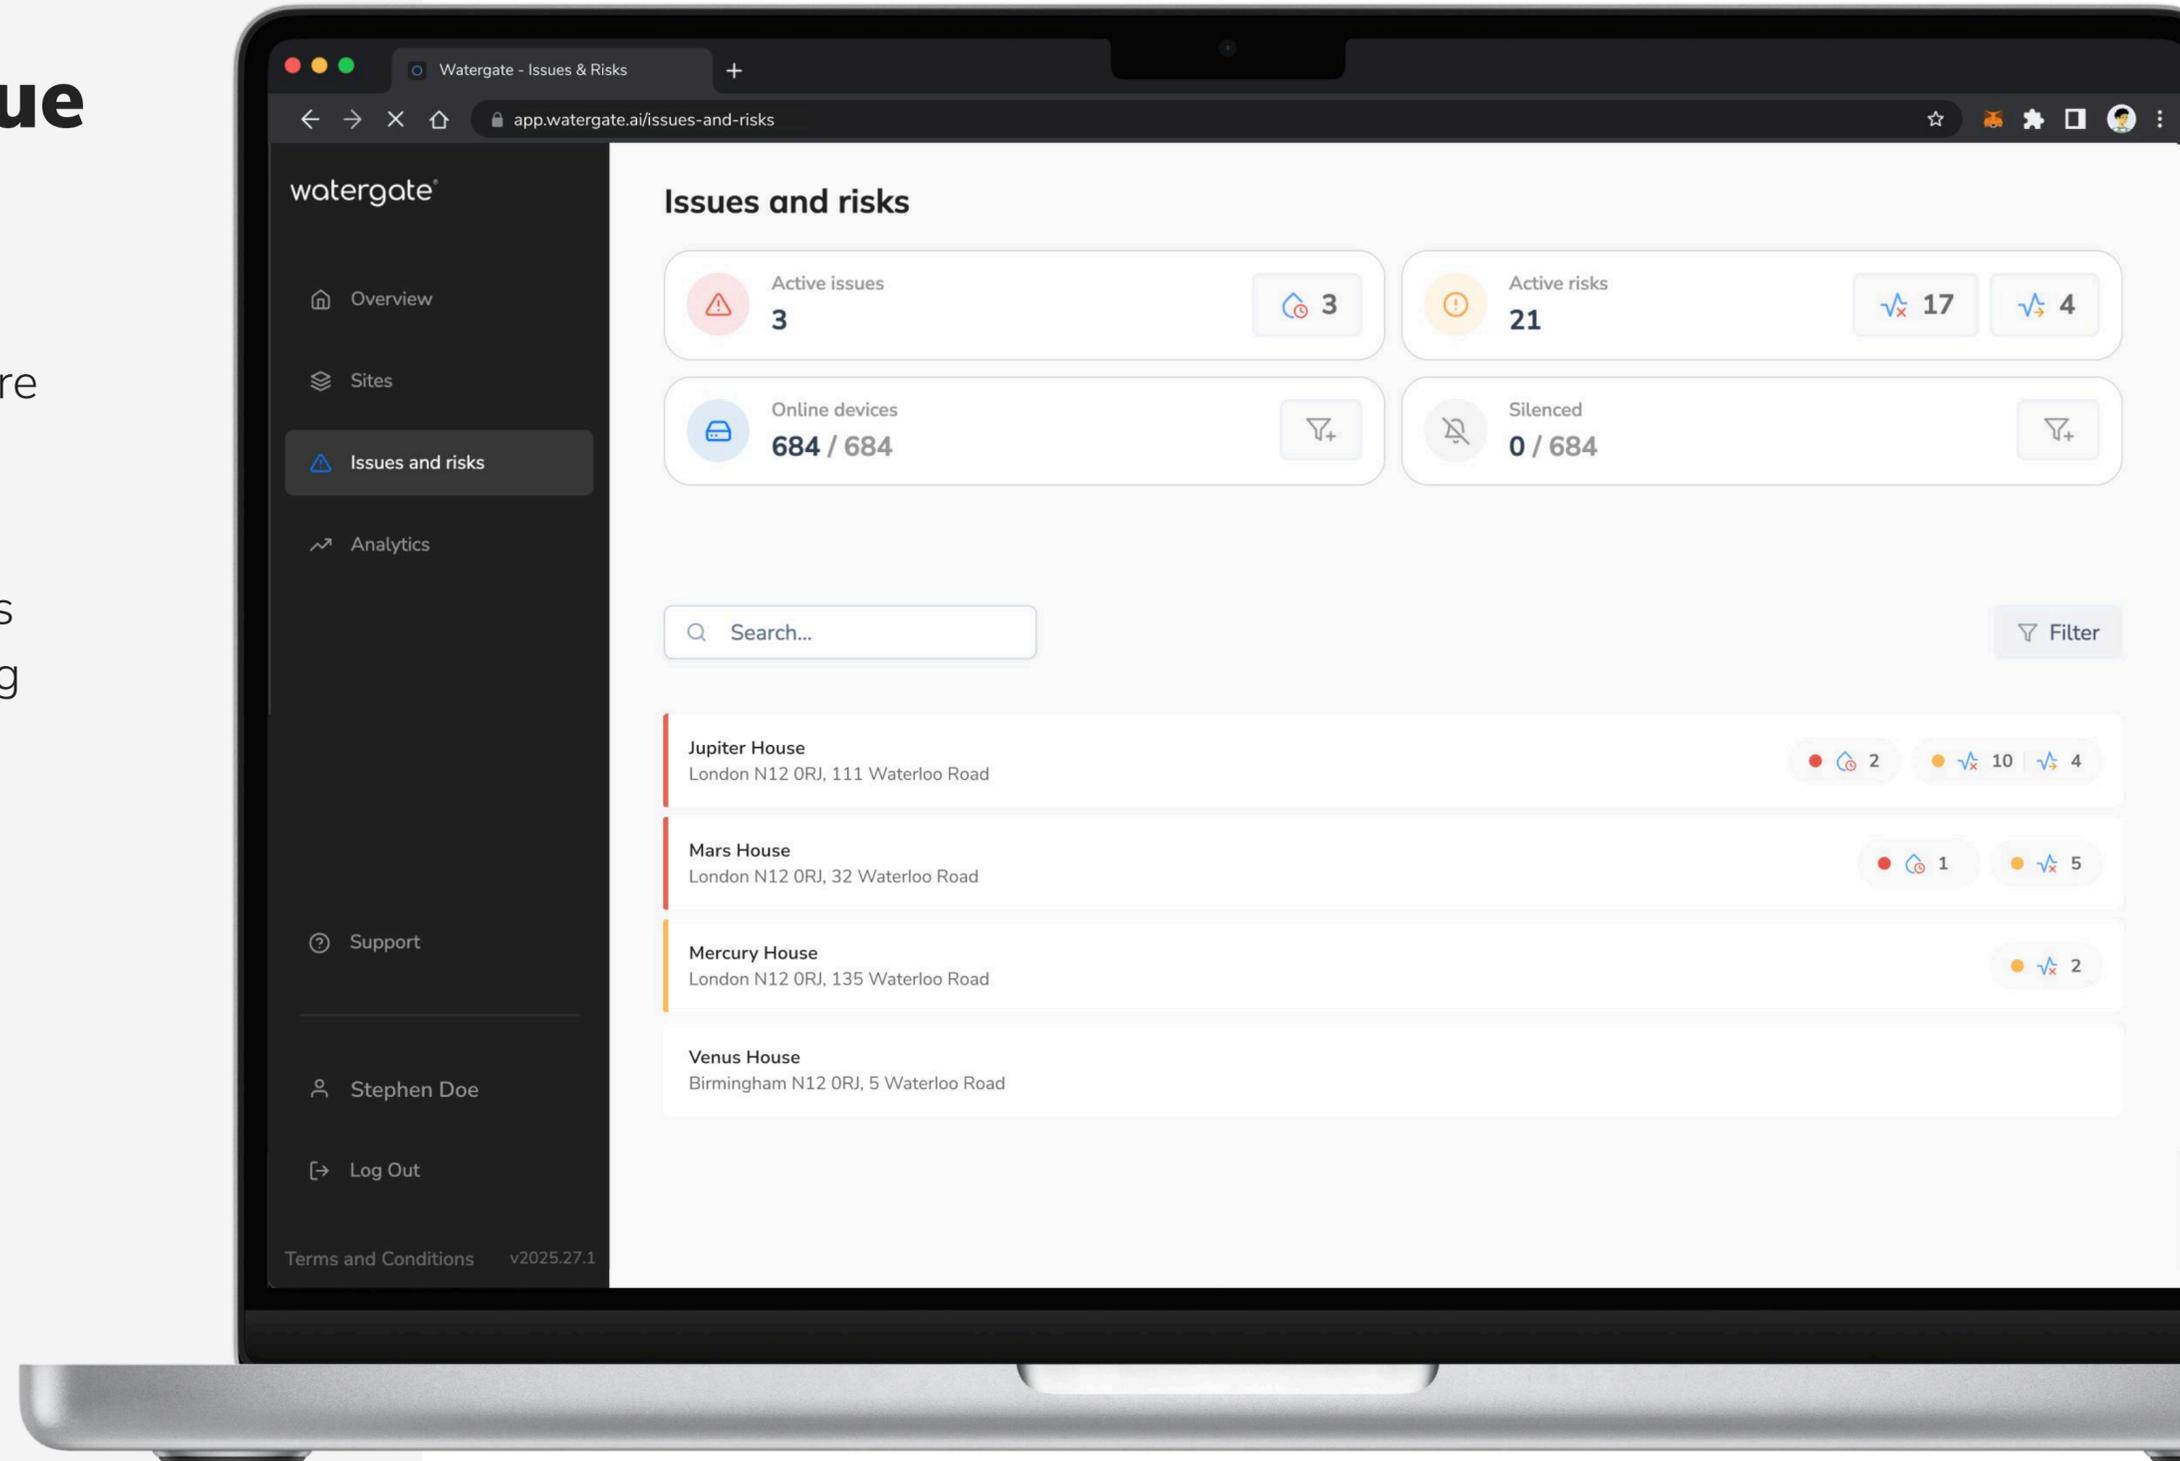

Stay on top of every issue

The *Issues and risks* page gives you a clear overview of **all active problems** across your portfolio. It helps you quickly understand where attention is needed – whether it's a leak, an offline device, or any other system alert.

You can filter the list of properties by the types of issues or risks they're experiencing – making it easy to see where problems occur and address them quickly.

Insights that drive smarter decisions

The *Analytics* page provides a deeper look into how your water systems perform across the entire portfolio or at individual properties. You can easily **review usage trends, compare performance between sites, and identify unusual consumption patterns**.

With flexible date ranges and downloadable reports, it's simple to track progress over time, support audits, or monitor sustainability goals. Clear visuals and intuitive navigation make it easy to turn data into meaningful actions that save water, money, and time.
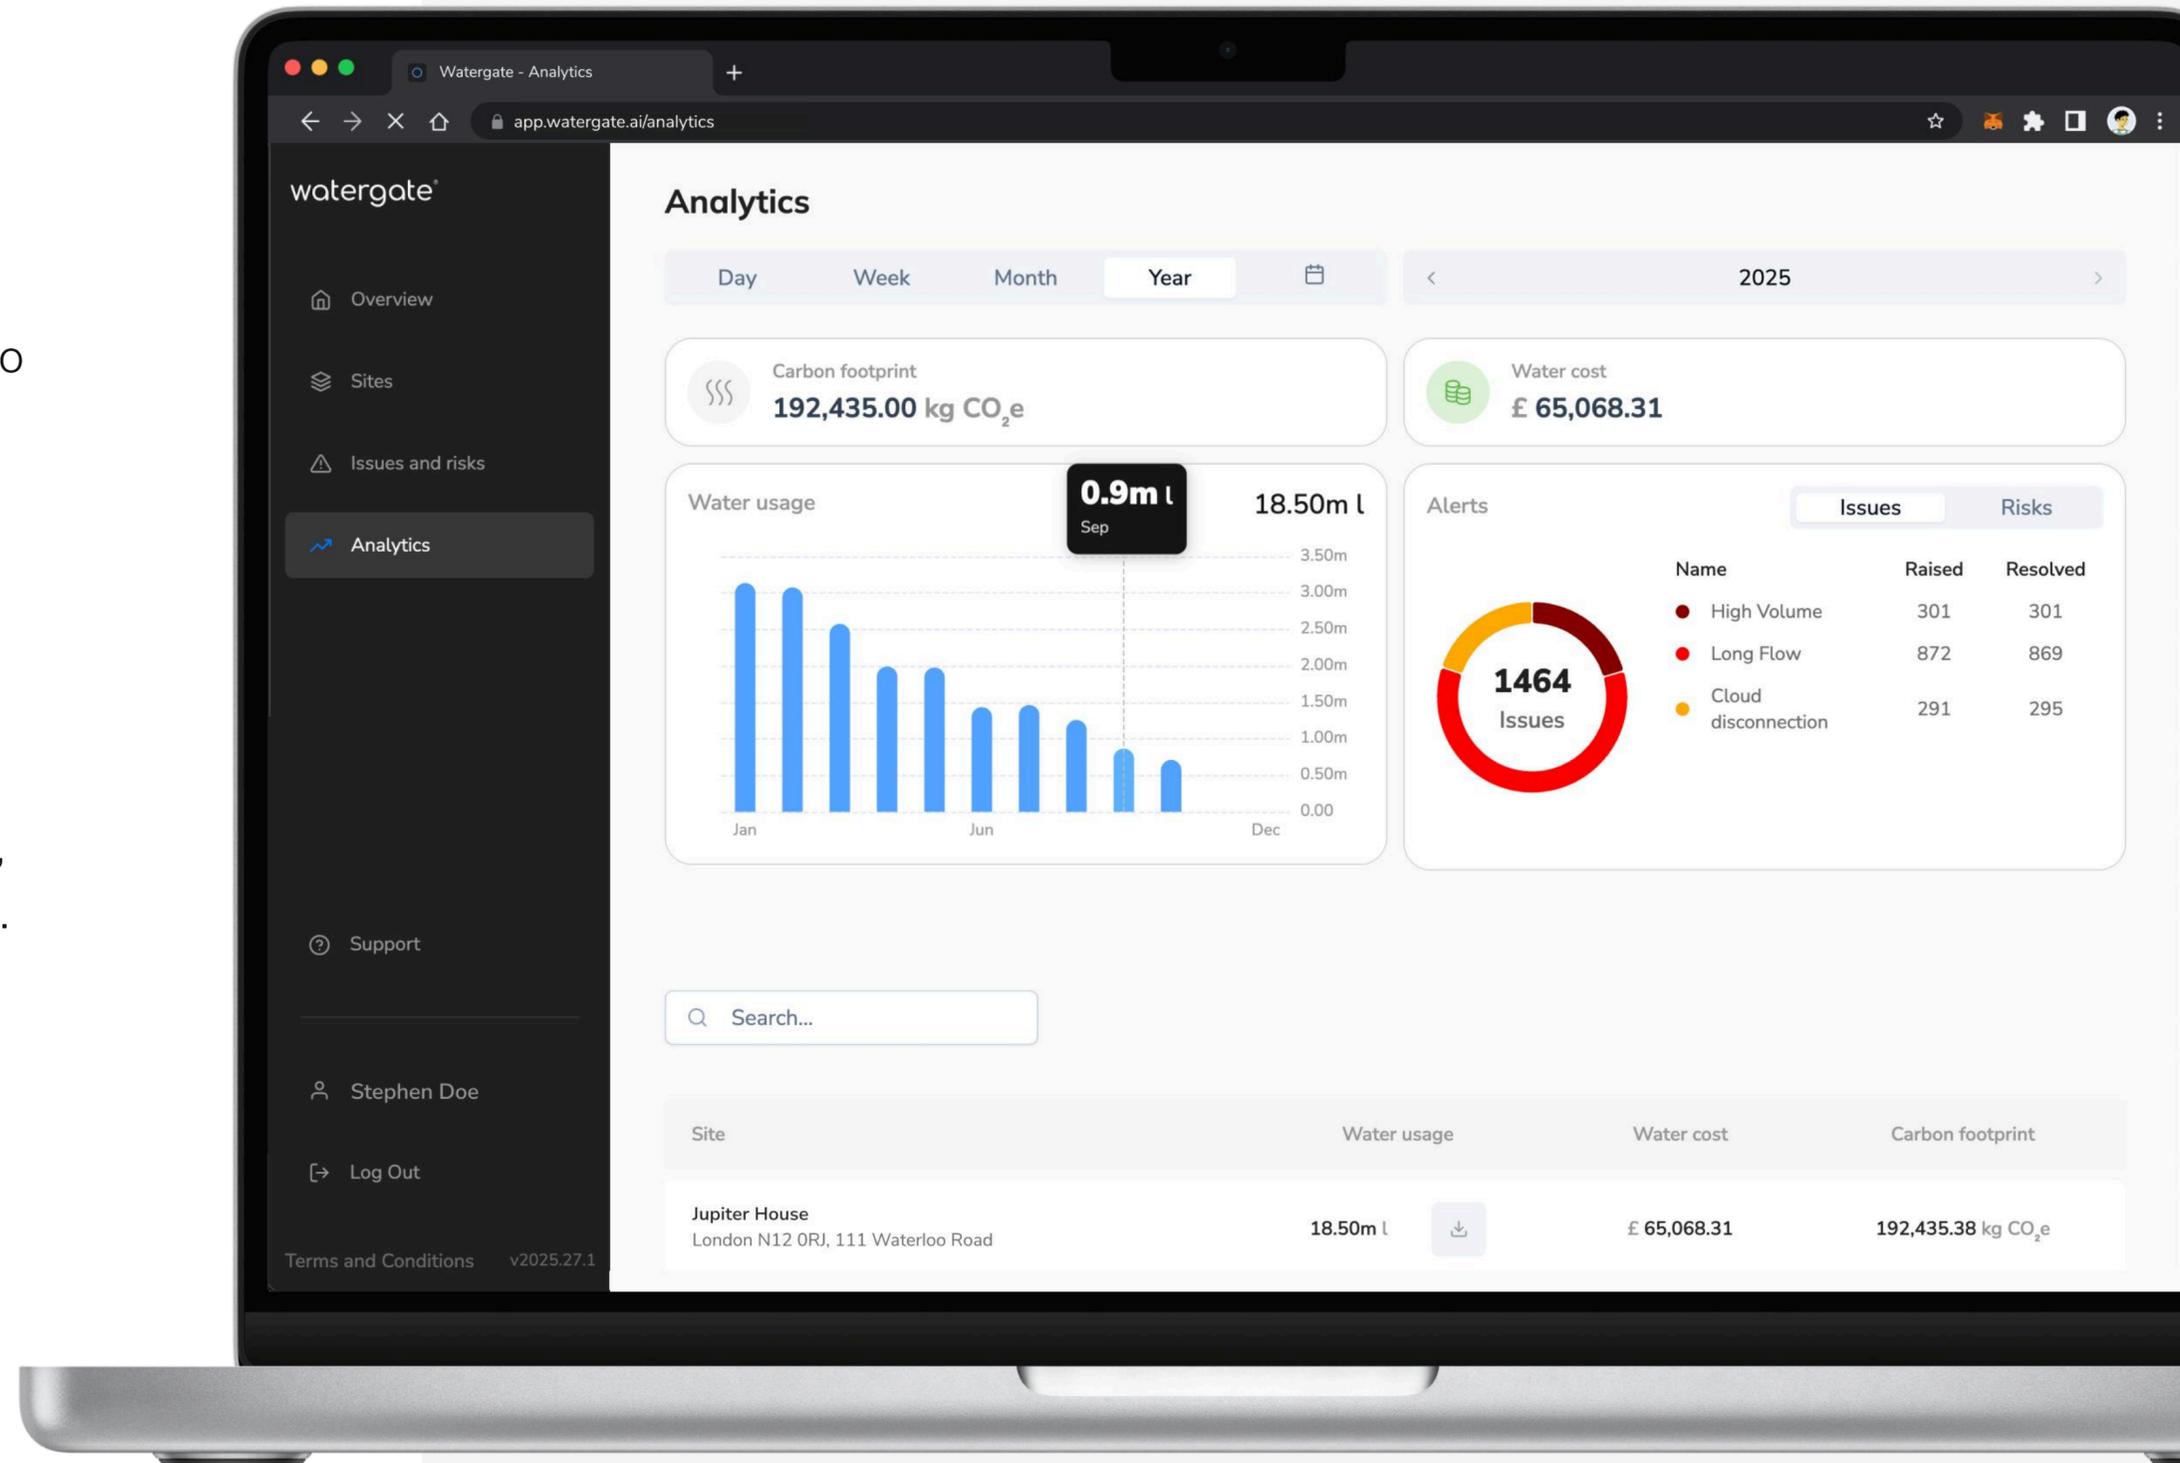

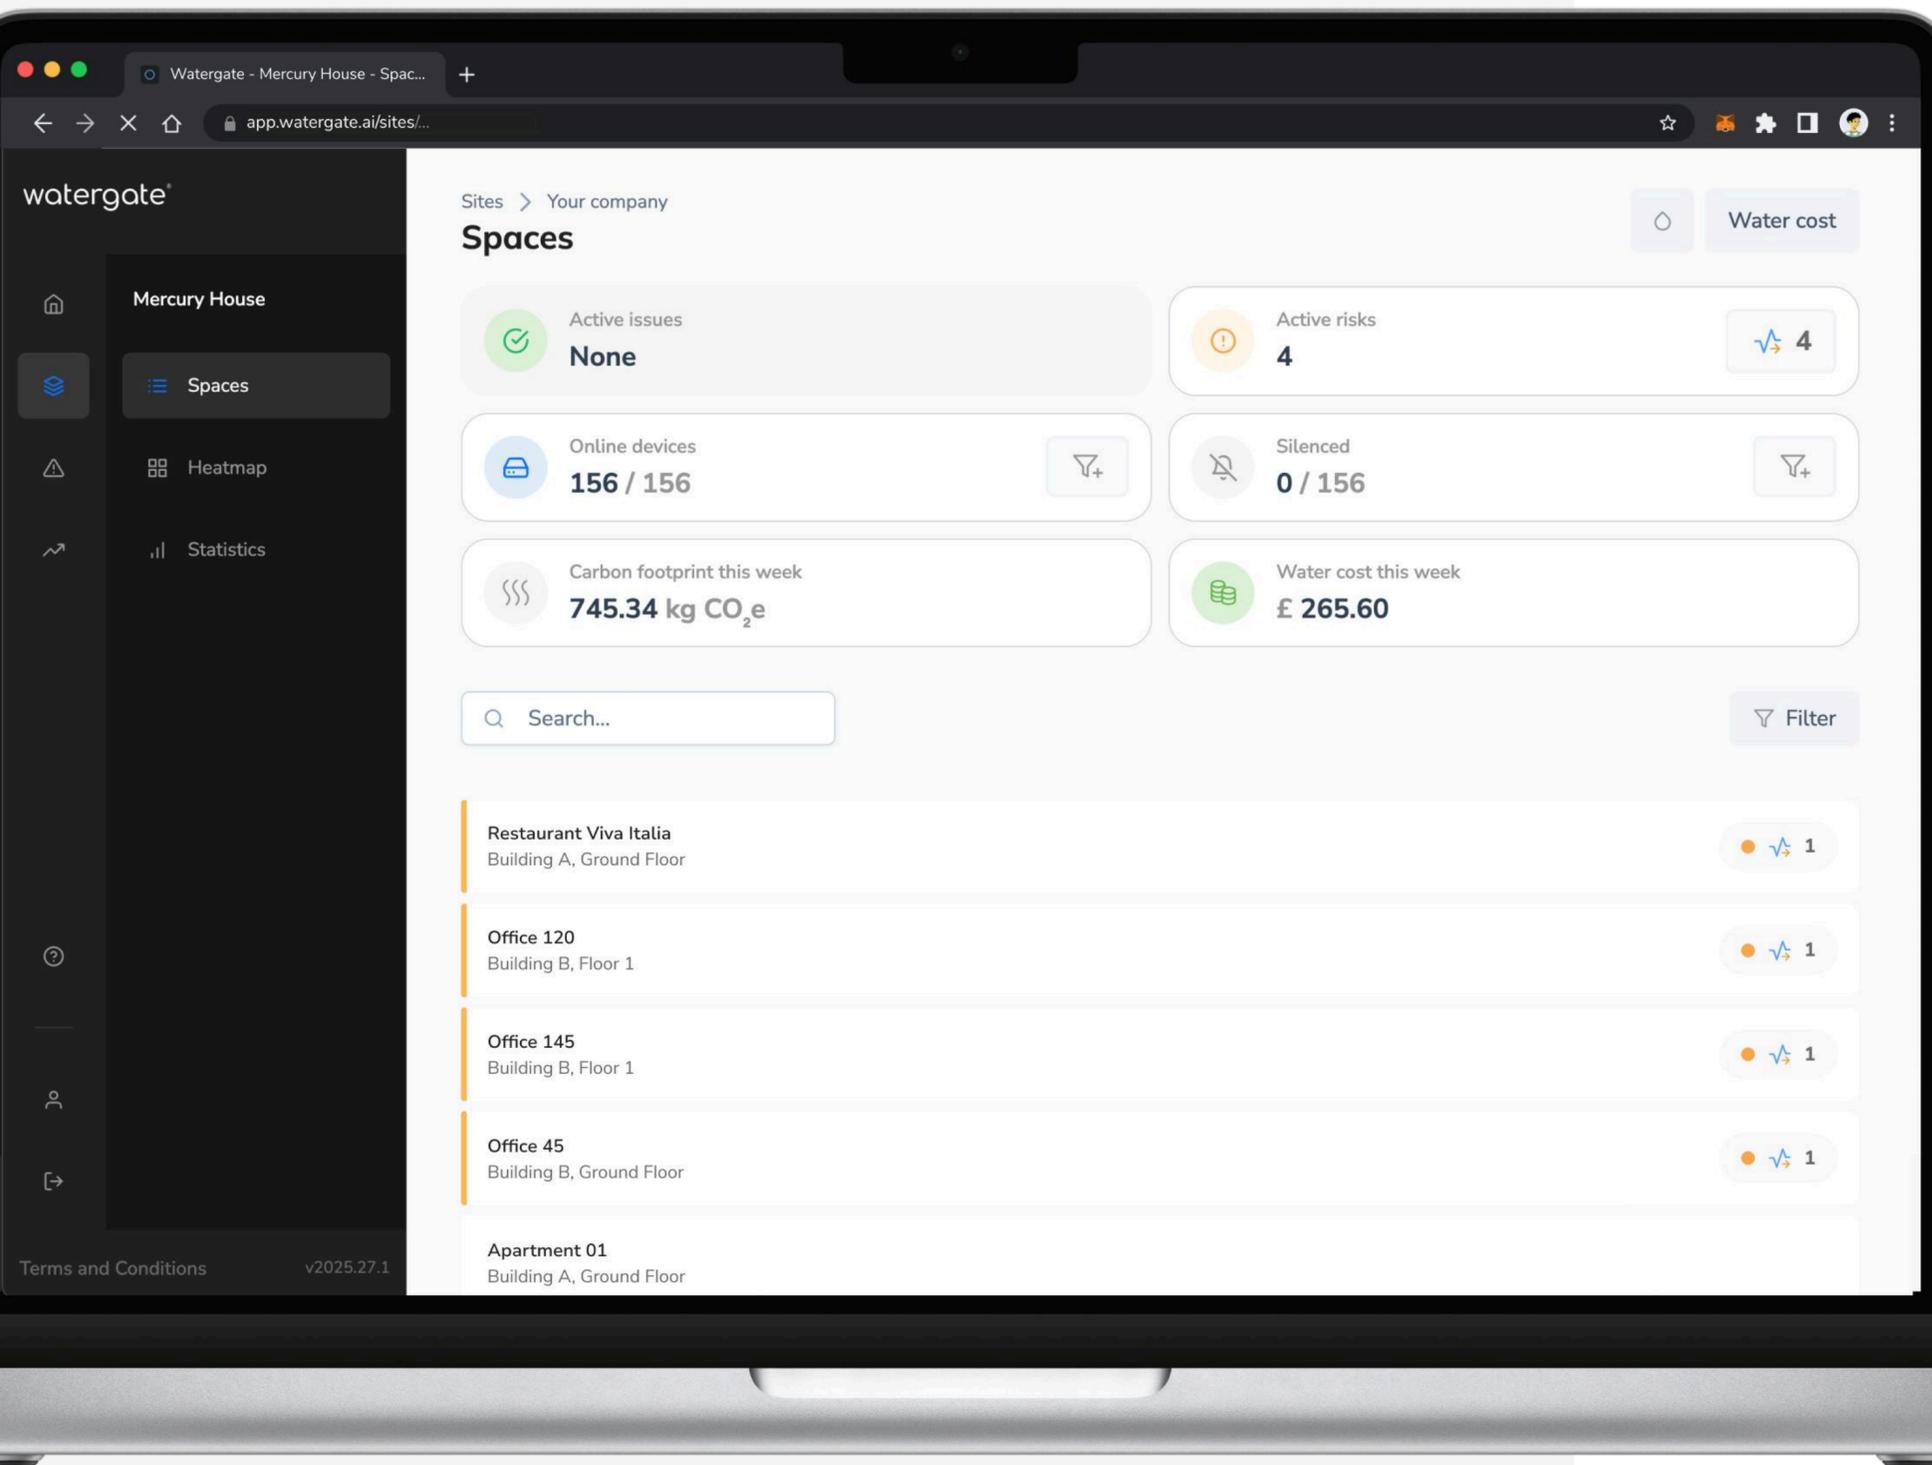

Spaces overview and performance insights

The *Spaces* page gives you a clear overview of **all areas within a property** where Sonic devices are installed. Each space is listed with its current status, making it easy to see where systems are functioning properly and where potential issues may exist.

You can also view property-wide statistics, including weekly water consumption and estimated carbon emissions, giving you a clear picture of overall environmental performance.
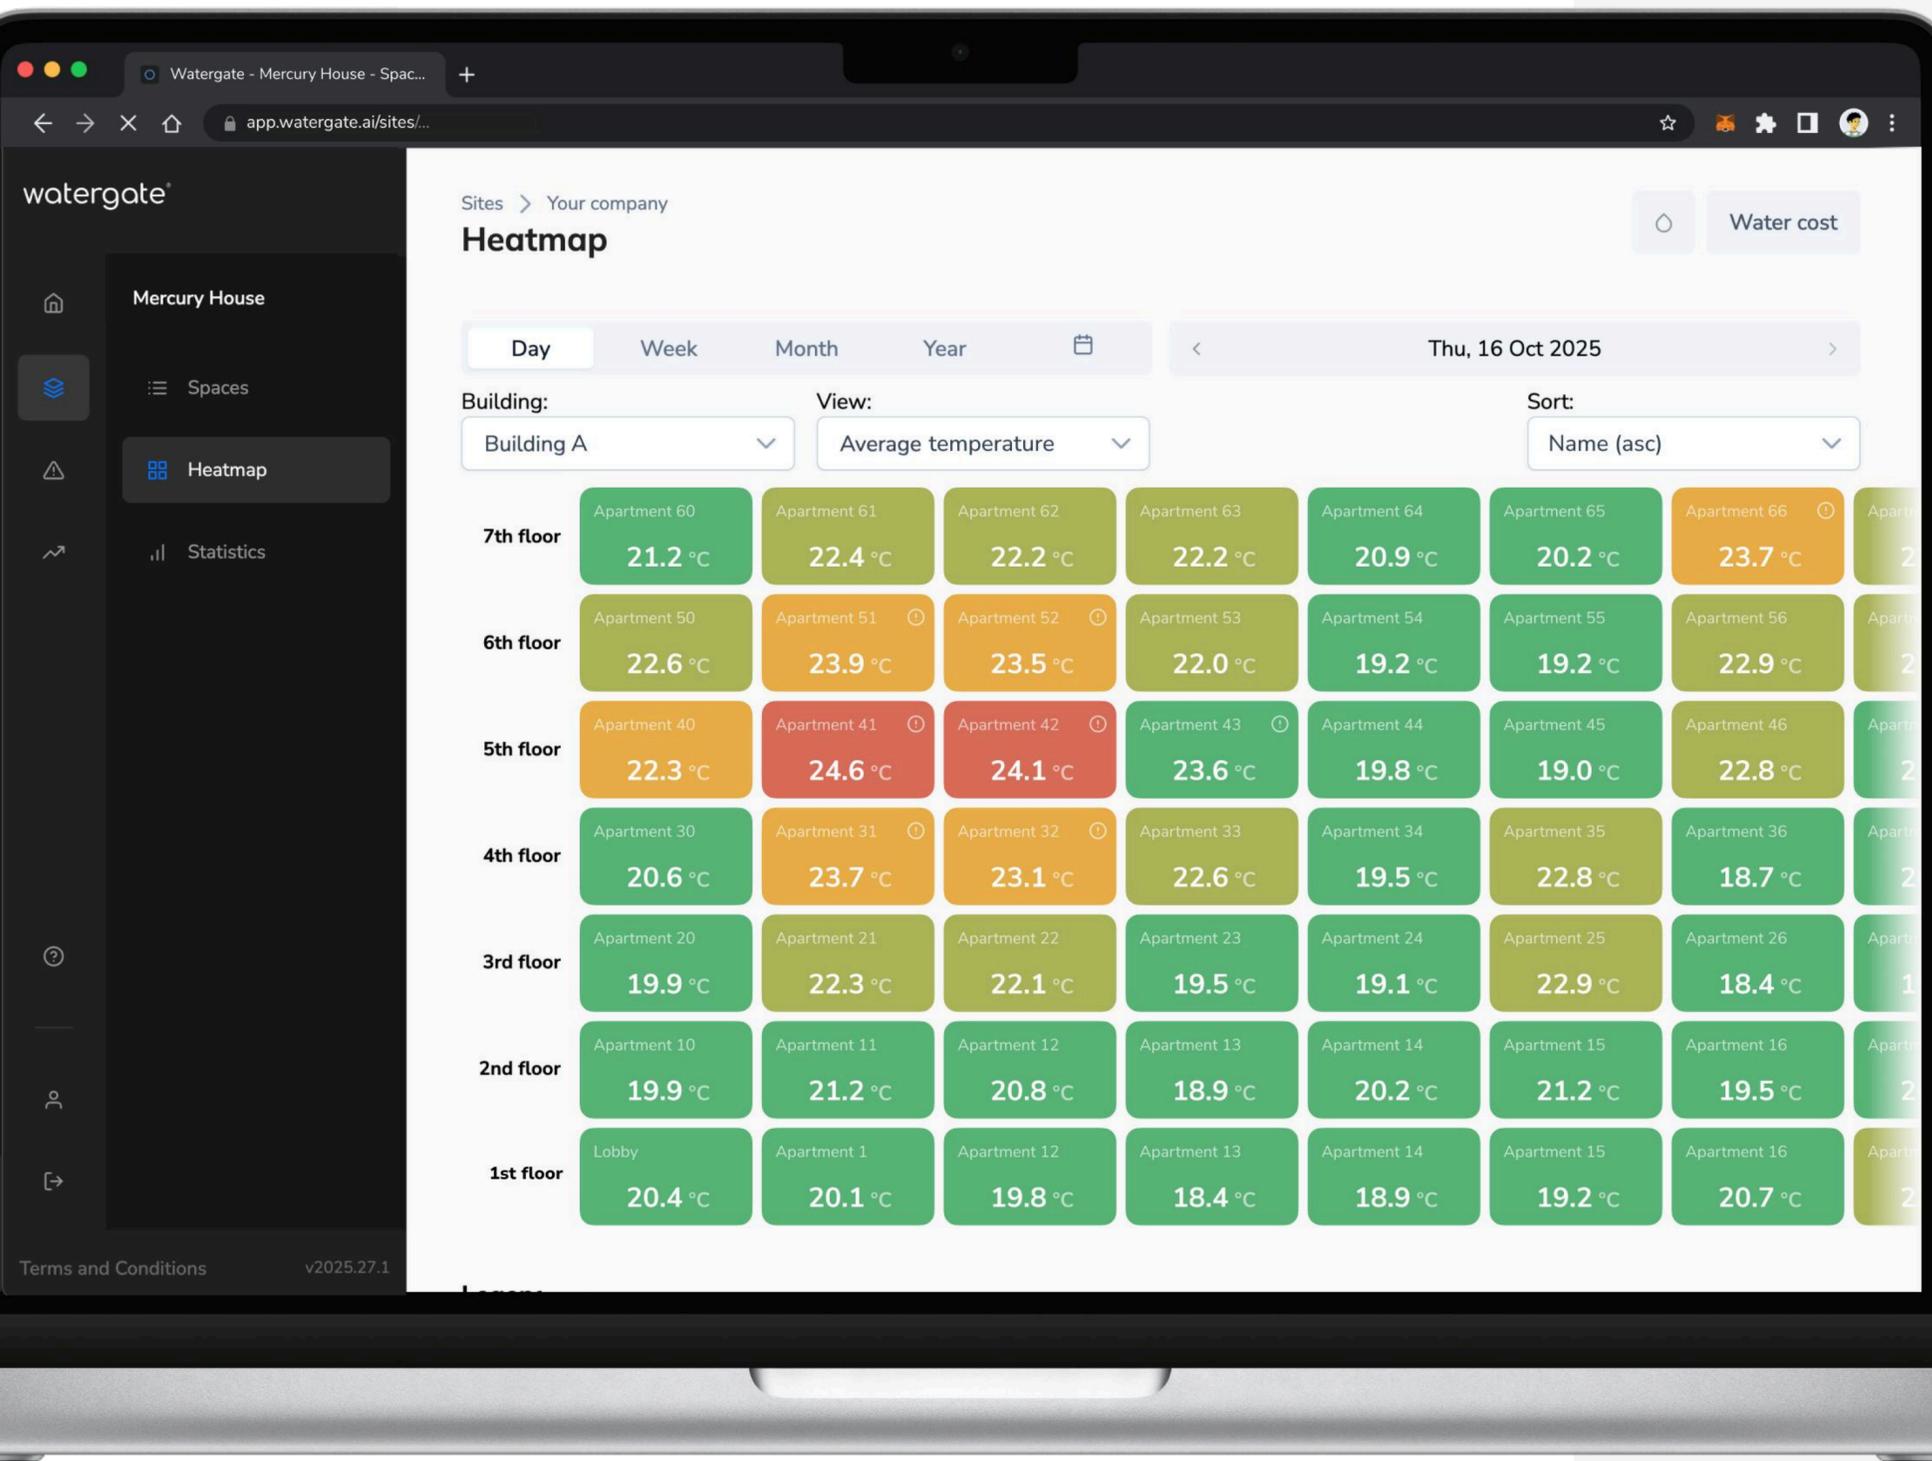

Heatmaps for quick visual insights

The *Heatmaps* view provides an **intuitive visual summary of your property's water performance**. Color-coded indicators make it easy to spot unusual activity, temperature fluctuations, or irregular consumption patterns at a glance.

This view helps you instantly identify areas that may require further inspection – whether it's potential leaks, inefficient systems, or changes in water usage over time. It's a powerful way to maintain full control of your building's water health.
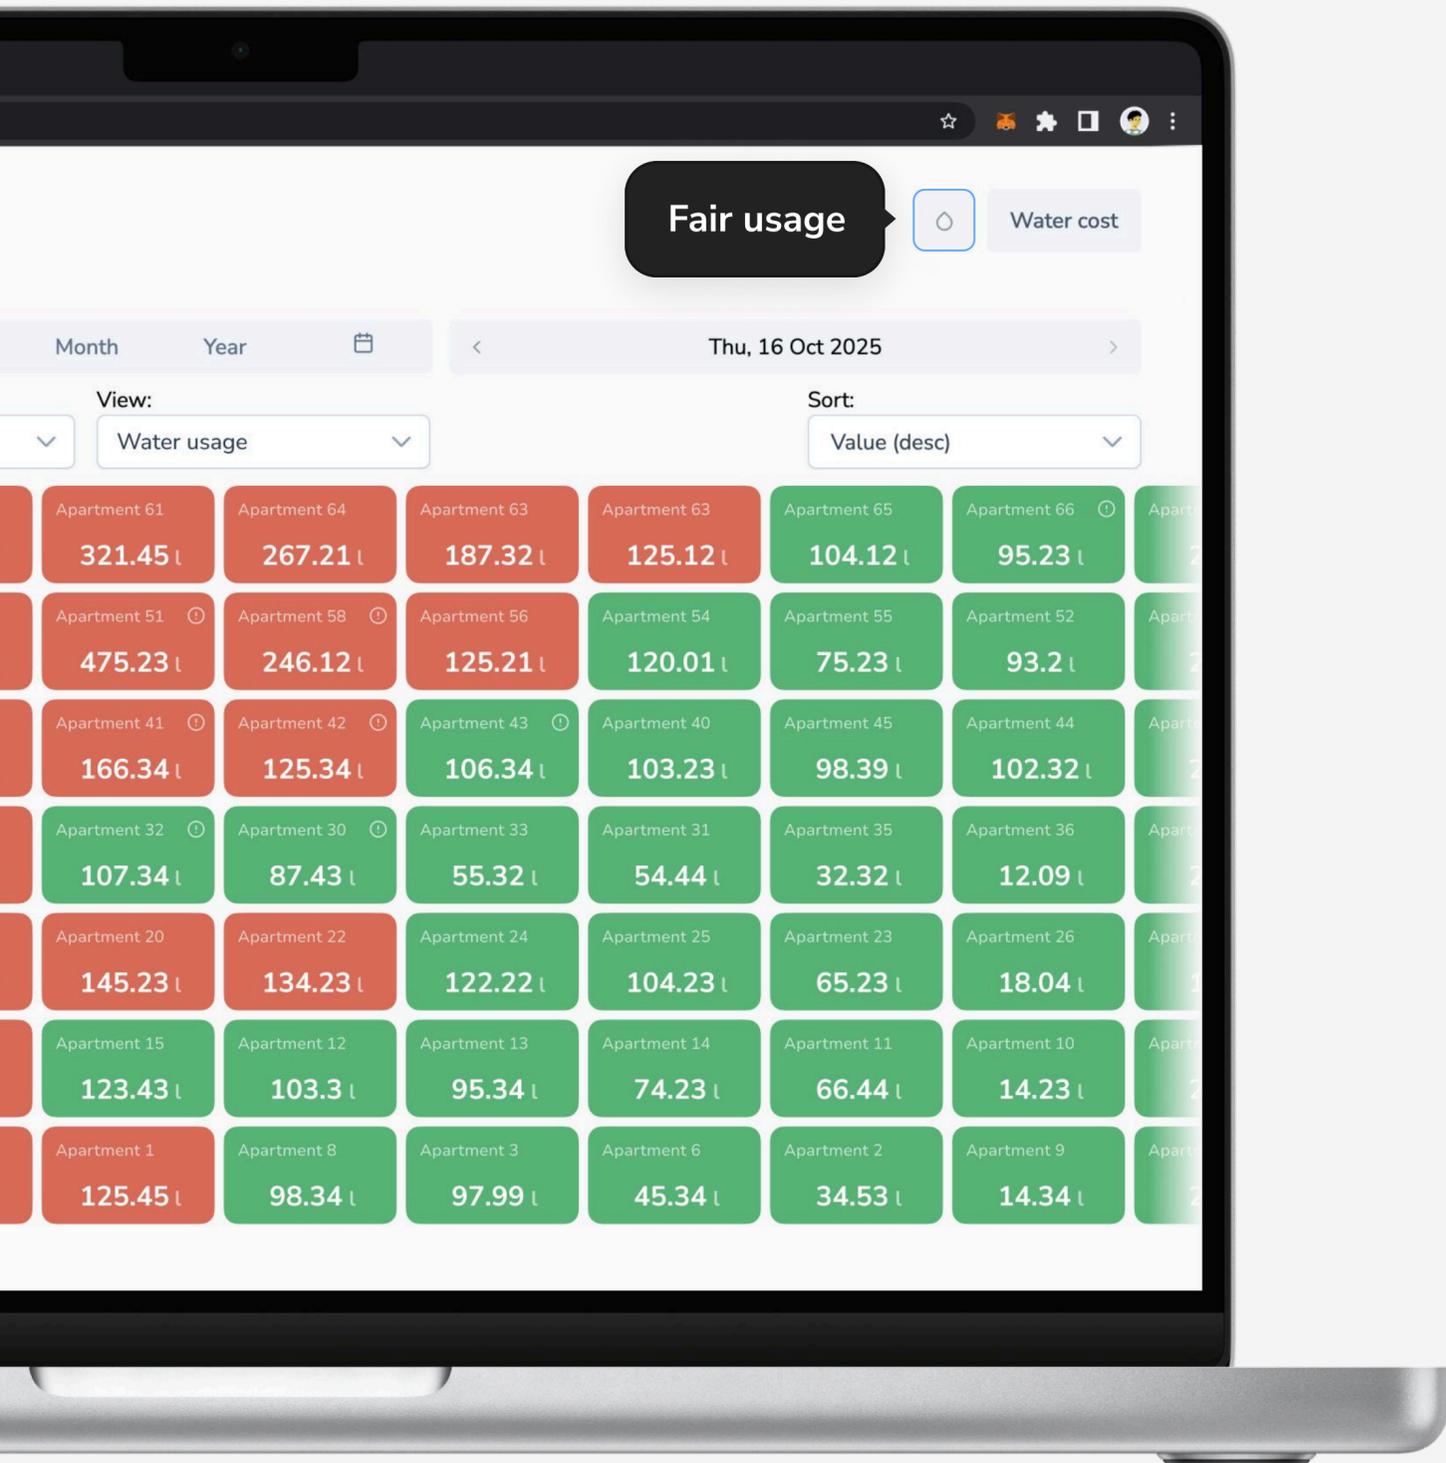

Identify overuse instantly with smart consumption Heatmaps

The *Water Usage Heatmap* gives you a real-time view of how each space **compares to expected consumption levels**.

Define a *Fair usage* threshold for every property, and Watergate automatically highlights areas exceeding that — whether it's a leak, a stuck flush, or simply wasteful behaviour. This helps you:

- **Detect leaks early**, before they cause damage.

- **Track abnormal usage** across buildings and time periods.

- **Benchmark consumption** to promote efficiency and fairness.

It's one of the most powerful tools in the dashboard — turning raw data into actionable insight.
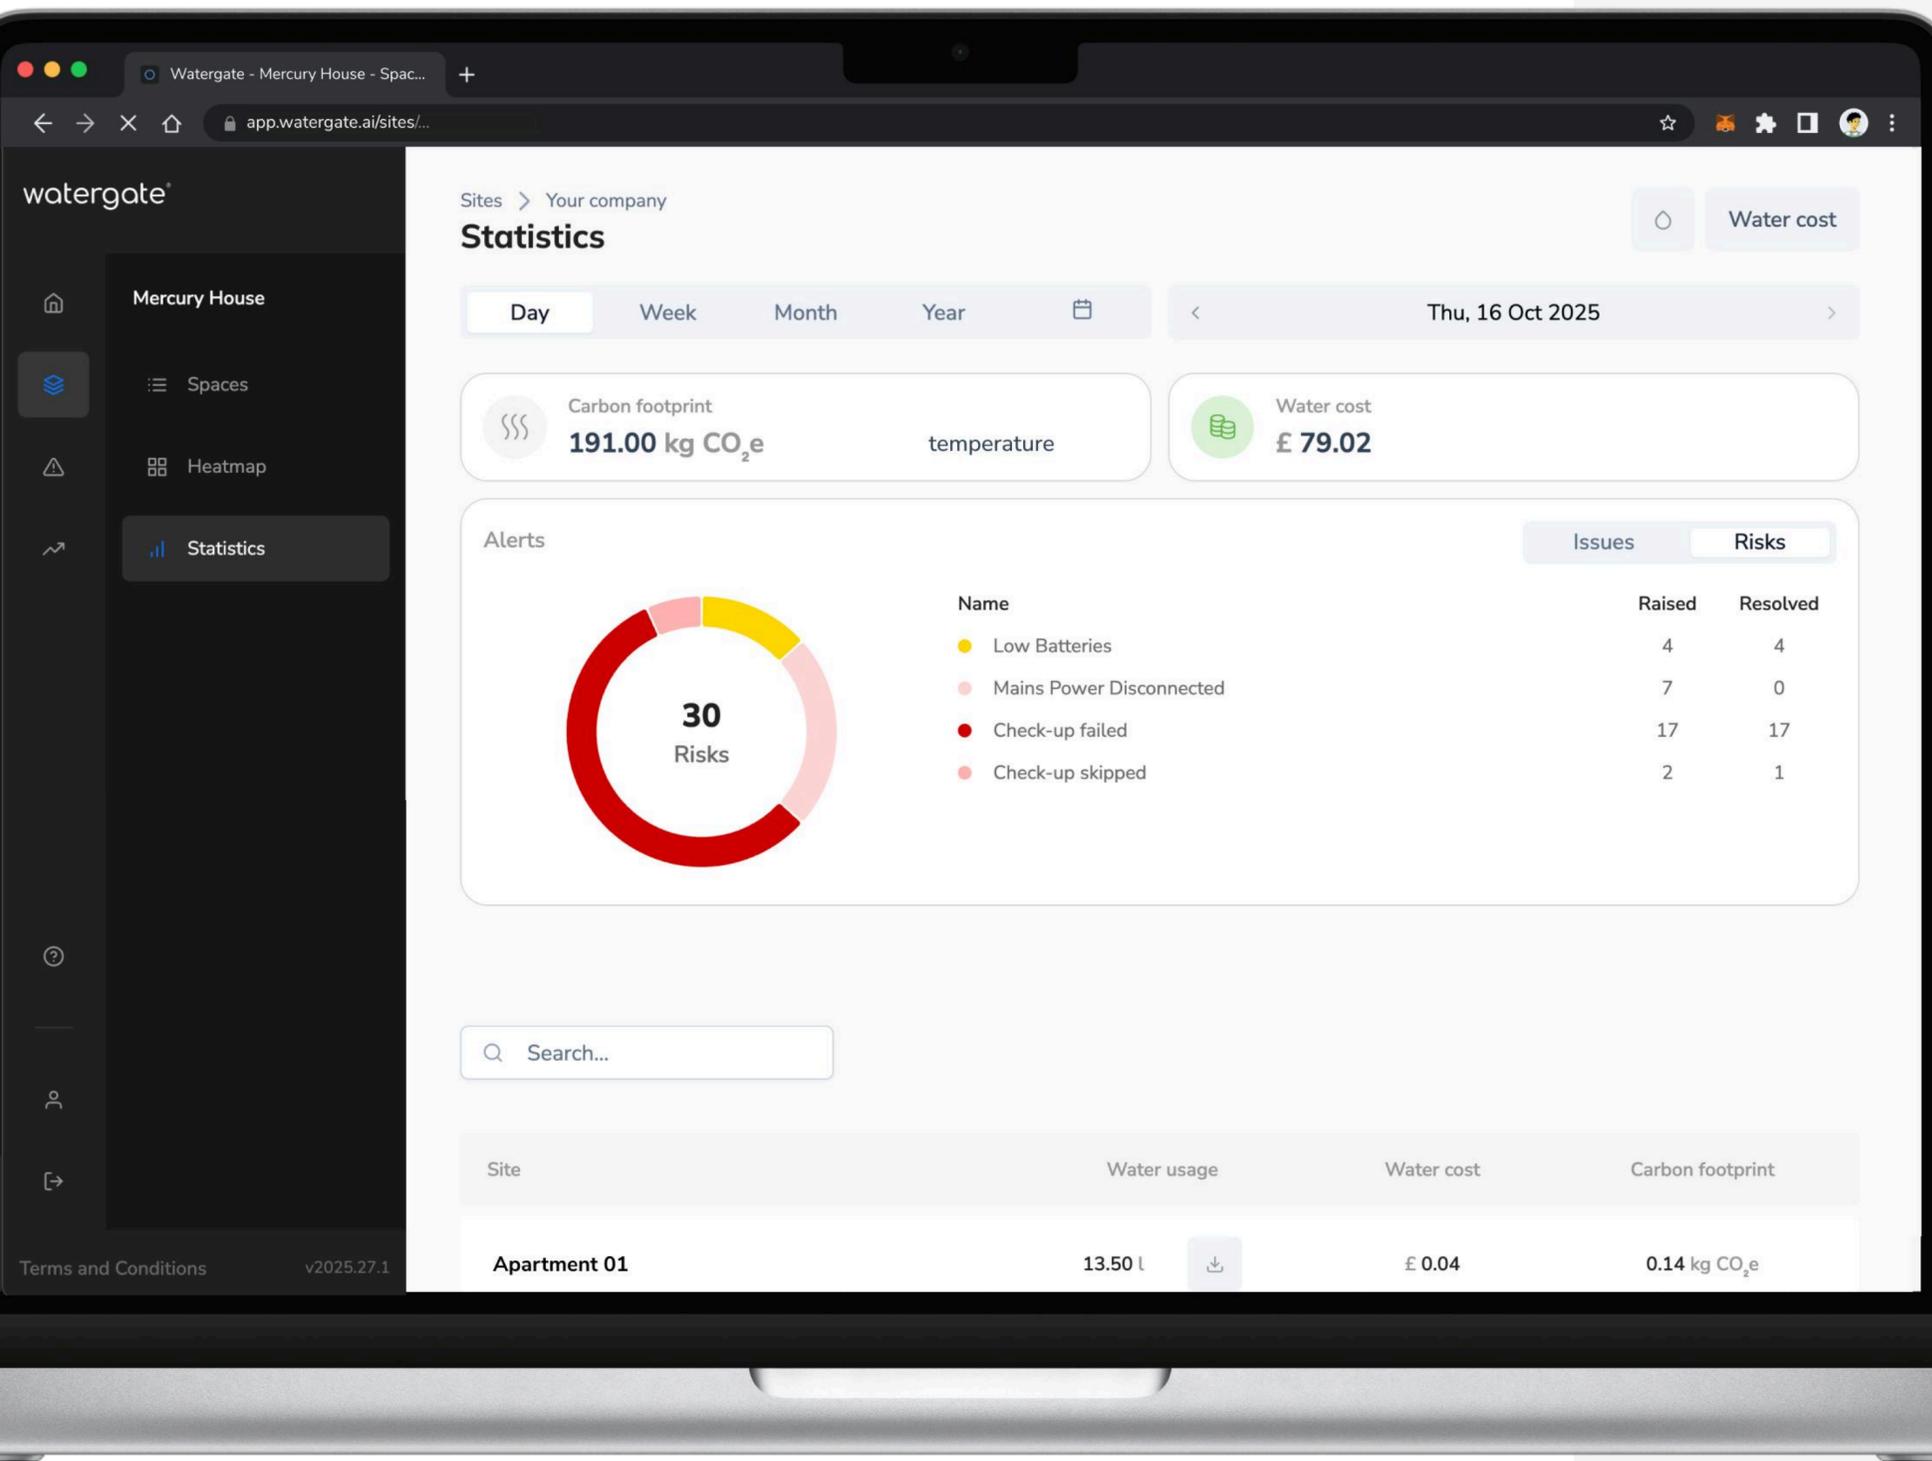

Detailed statistics for smarter management

The property *Statistics* page gives you a deeper understanding of how each property performs over time. You can review issue and risk data broken down by type to identify recurring problems and assess their impact.

It also lists **data for each space**, allowing you to spot irregularities and make informed adjustments.

Real-time status and device insights

The *Space* page gives you a live view of what's happening in a specific area of your property. You can see active issues, along with **real-time readings** of water temperature and pressure – helping you ensure everything stays within safe limits.

It also provides **full control and visibility over the installed Sonic**, including valve status, network connection, power supply, and protection thresholds. From here, you can easily switch water on or off and adjust device settings as needed.
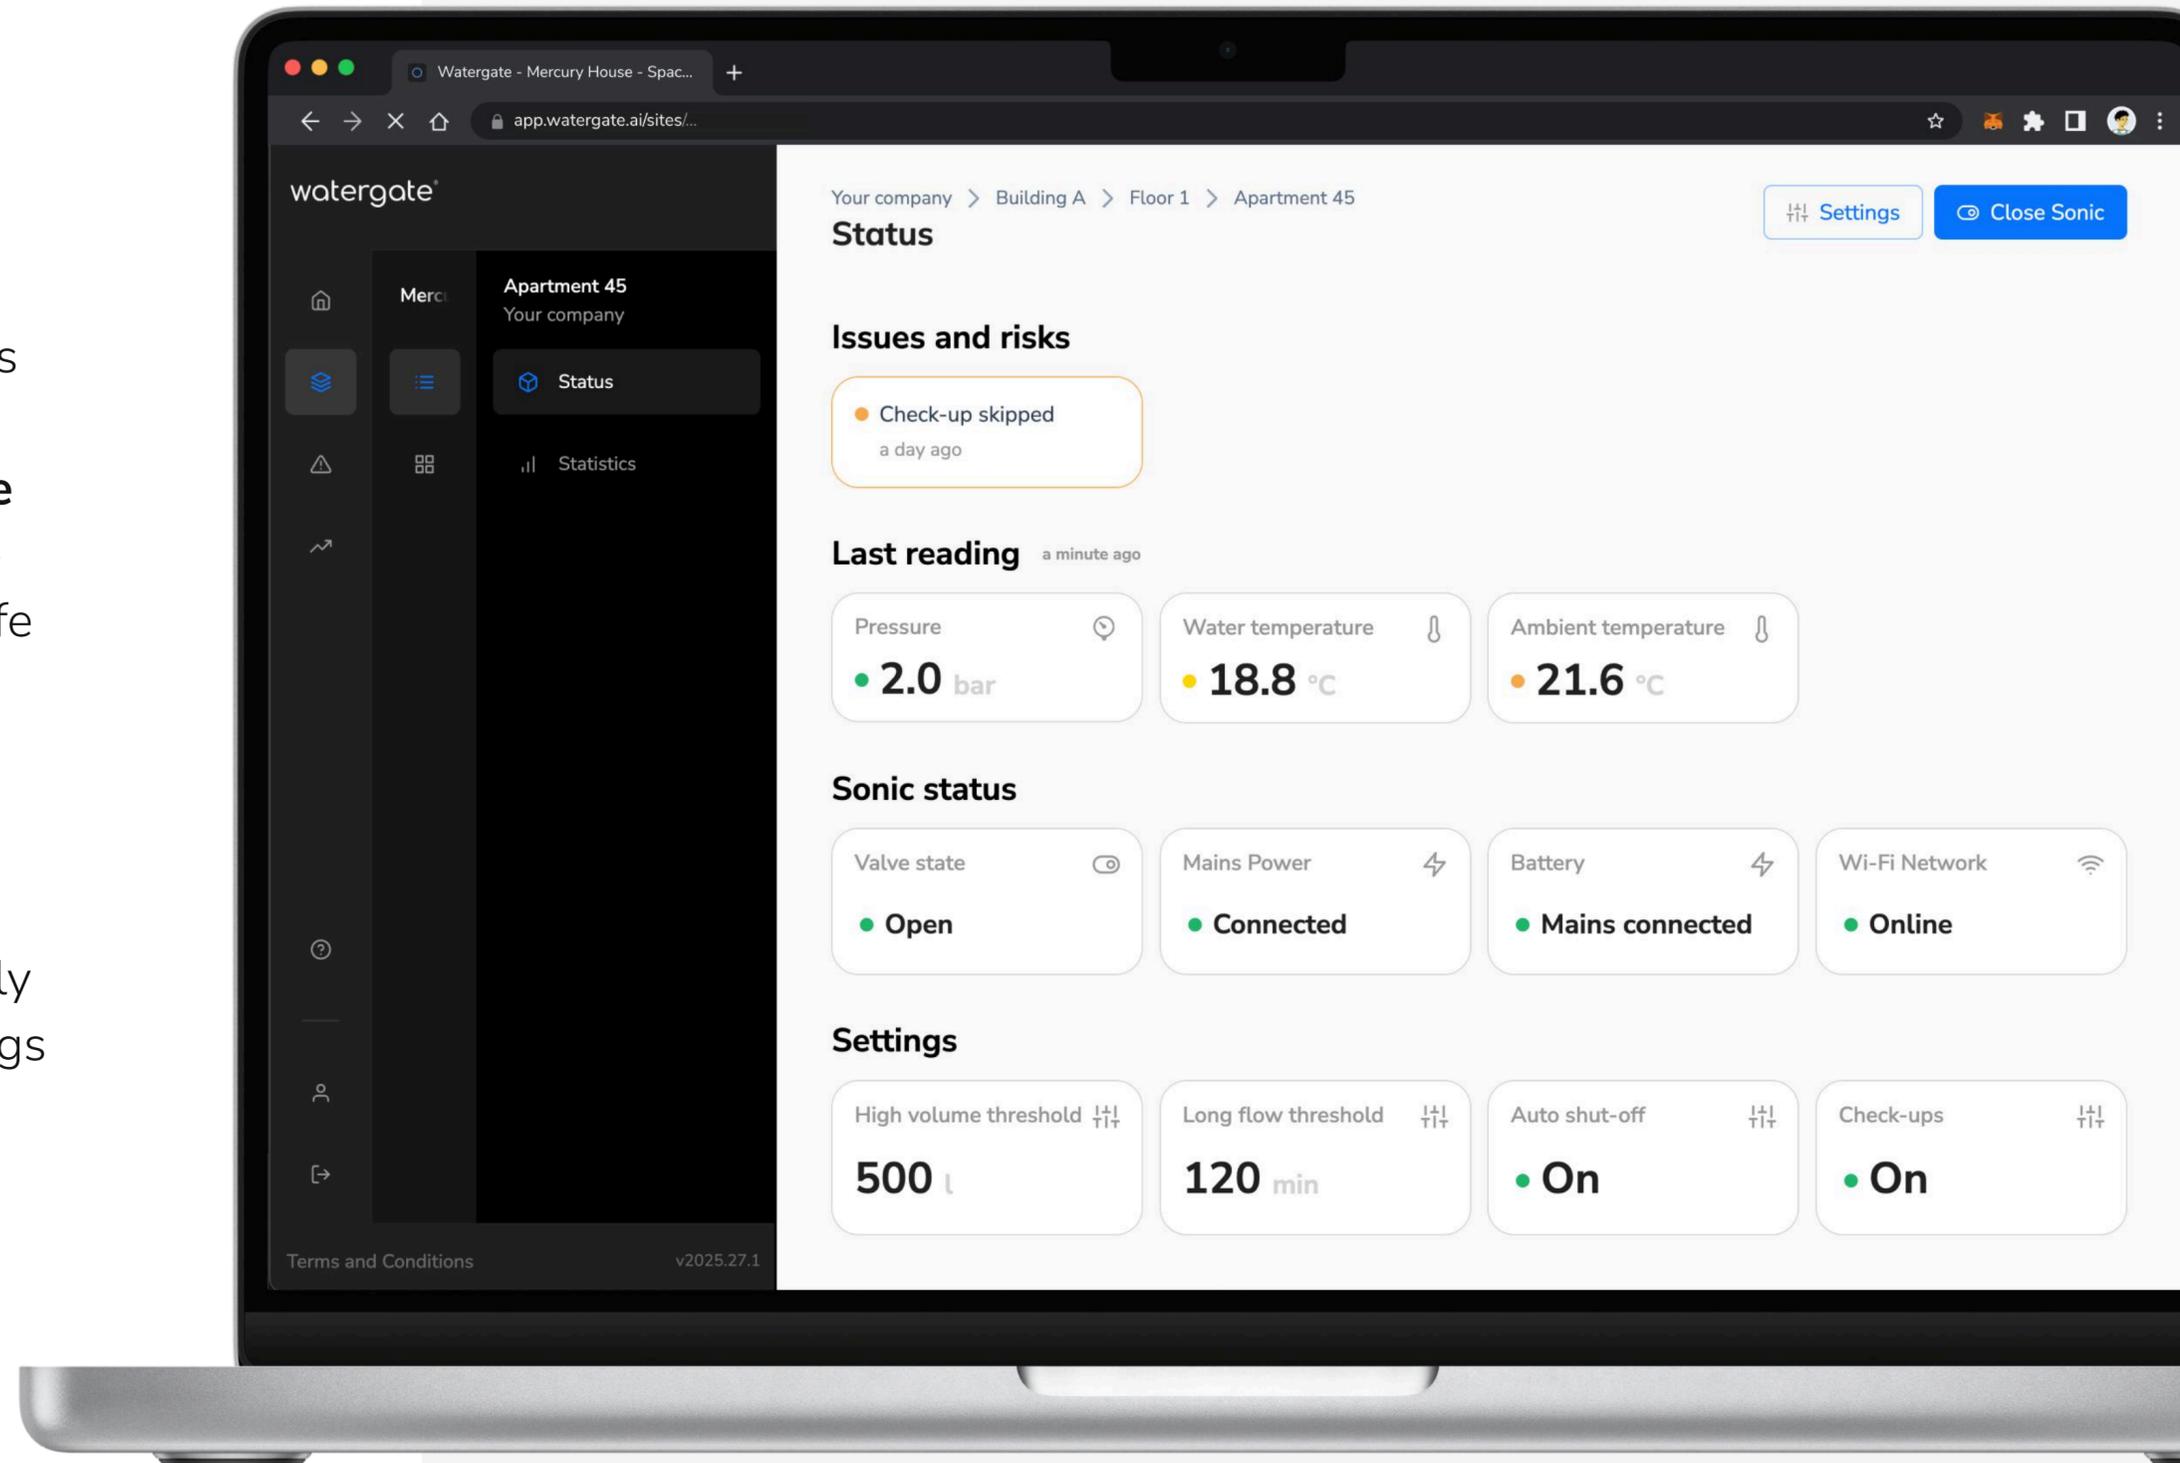

Detailed statistics for every space

The space's *Statistics* section gives you a clear and structured **overview of water performance within a specific space**. You can track key parameters such as consumption, temperature, and pressure to understand how the system behaves in daily operation.

In addition, the page allows you to review any issues or risks associated with that space, along with a full history of checkups.
