Connecting the drops

A scenic view of a river flowing through a forested valley. The river is in the foreground, surrounded by lush green vegetation and large rocks. The background features misty, forested mountains under a soft, overcast sky. The overall atmosphere is serene and natural.

Save **water**. Save **money**.
Protect the **planet**.

We need to talk about **water**.

1

Water leaks are the **#1 cause of damage** to UK property - by a huge margin.

2

Leaks cause **more damage** than all fires and burglaries **combined**.

3

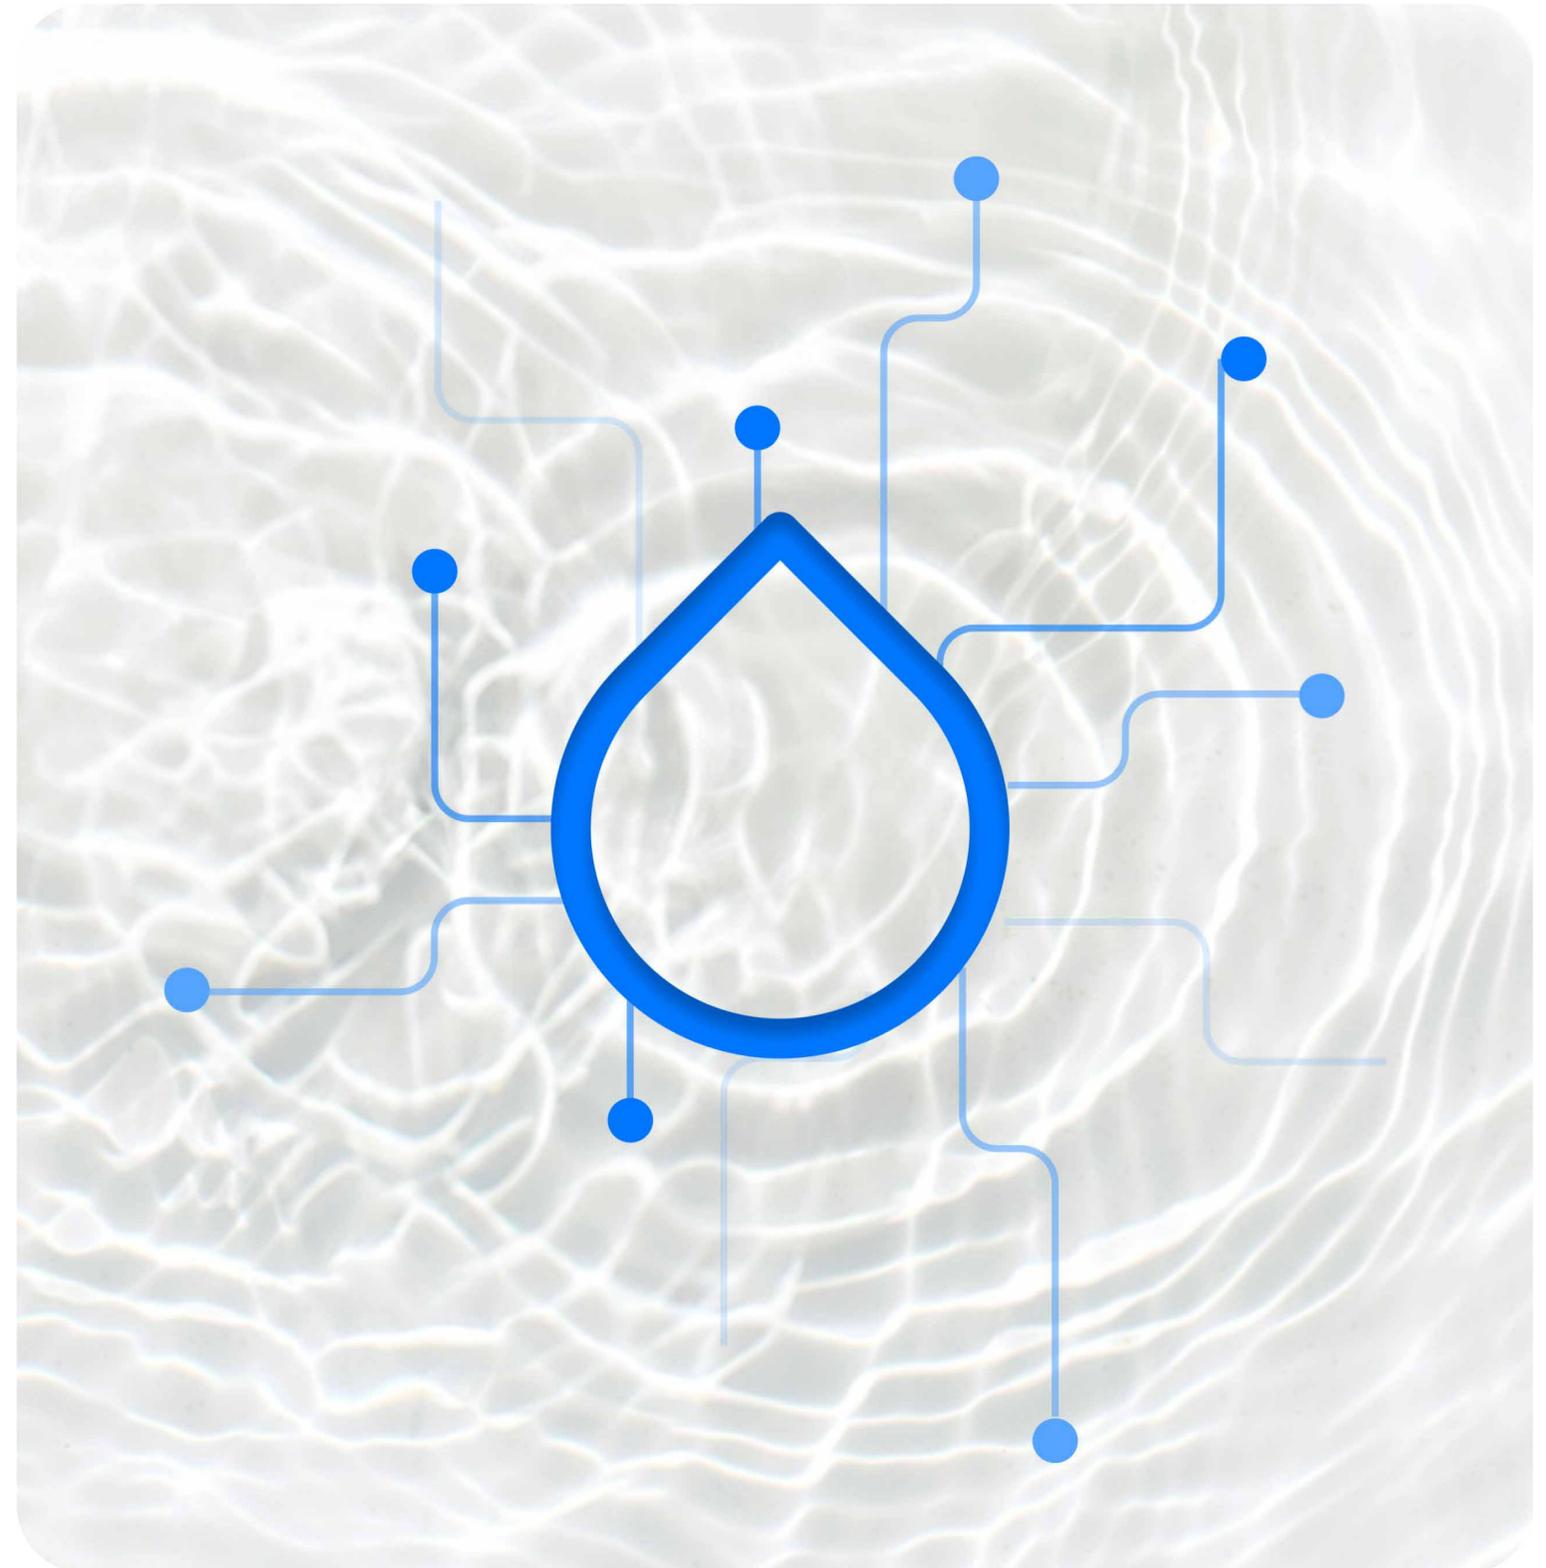

3.2 billion of litres is wasted per day in the UK alone due to leaks; more than the total water consumption of London.

Time for smarter water

The stopcock was invented in the 18th century.
It hasn't improved much since.

Water is one the most important resources in any home
or business, but in a world where we are surrounded
by smart technology, our water supply remains dumb.

It's time for that to change.

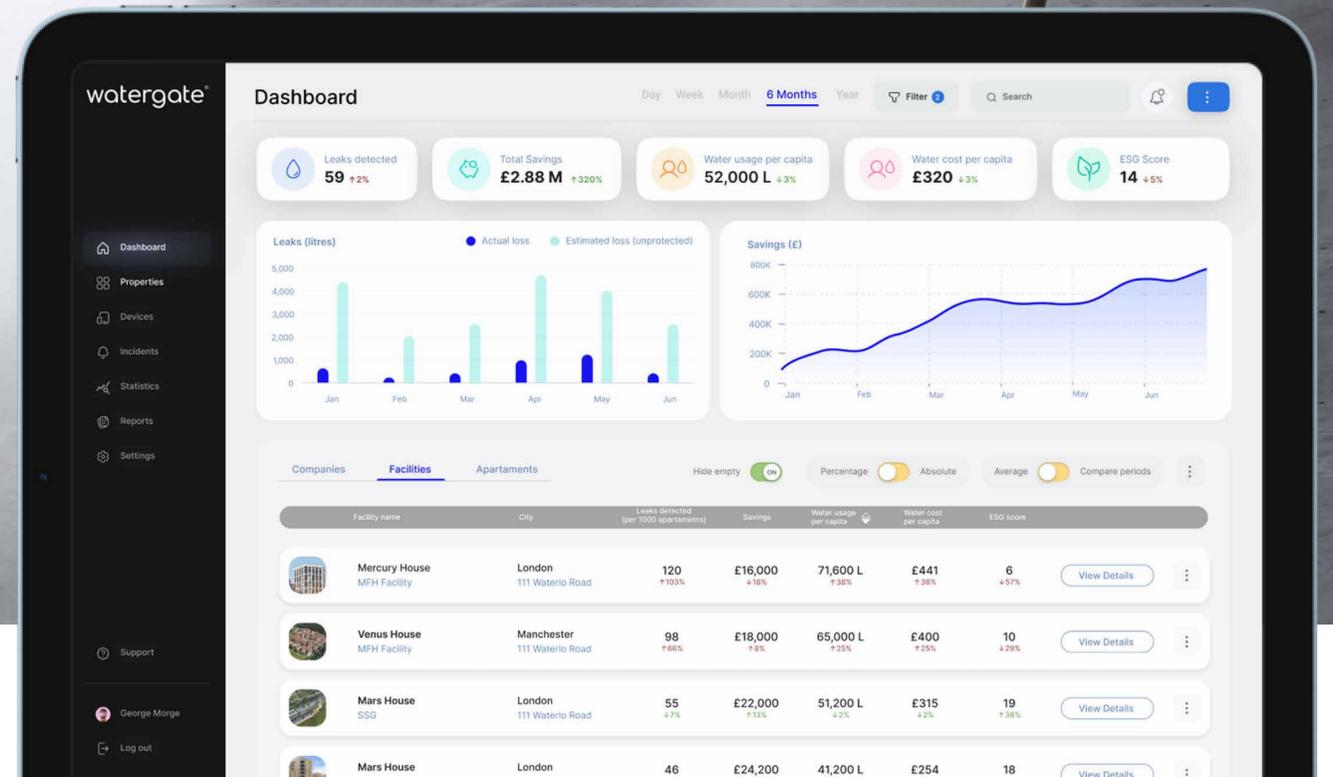

Watergate is an advanced AI-powered water management system that helps you save money, protect your property, and the planet.

Multi-award-winning technology

Watergate scans your water supply 24/7 to monitor water use, track the cost and carbon footprint, and detect all kinds of problems from burst pipes right down to dripping taps.

Get real-time alerts for any problems and shut off the water from **anywhere in the world** - or let Autopilot mode do it for you and stop the damage, fast.

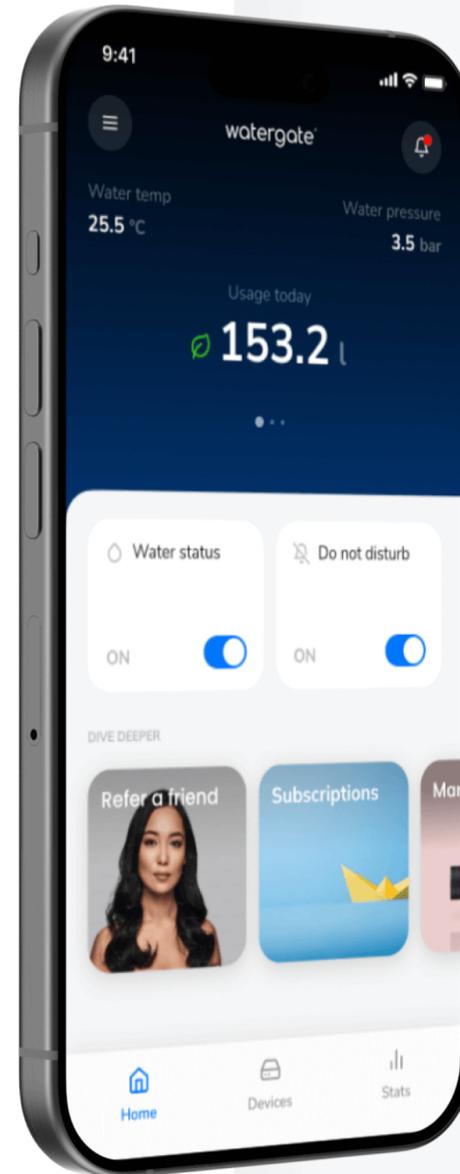

Connected and protected

Track your water use and reduce your bills with genuinely **helpful insights**.

Easily identify **water wasters** like dripping taps and stuck toilet flappers.

Our **Signature AI** can even recognise individual appliance types and track their consumption.*

High Volume Behaviour

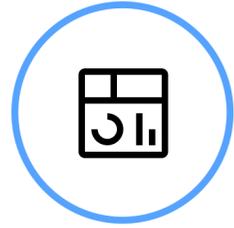

Warning - a high level of water usage has been detected. Tap here for further details.

WATER OFF **WATER ON**

Built for business

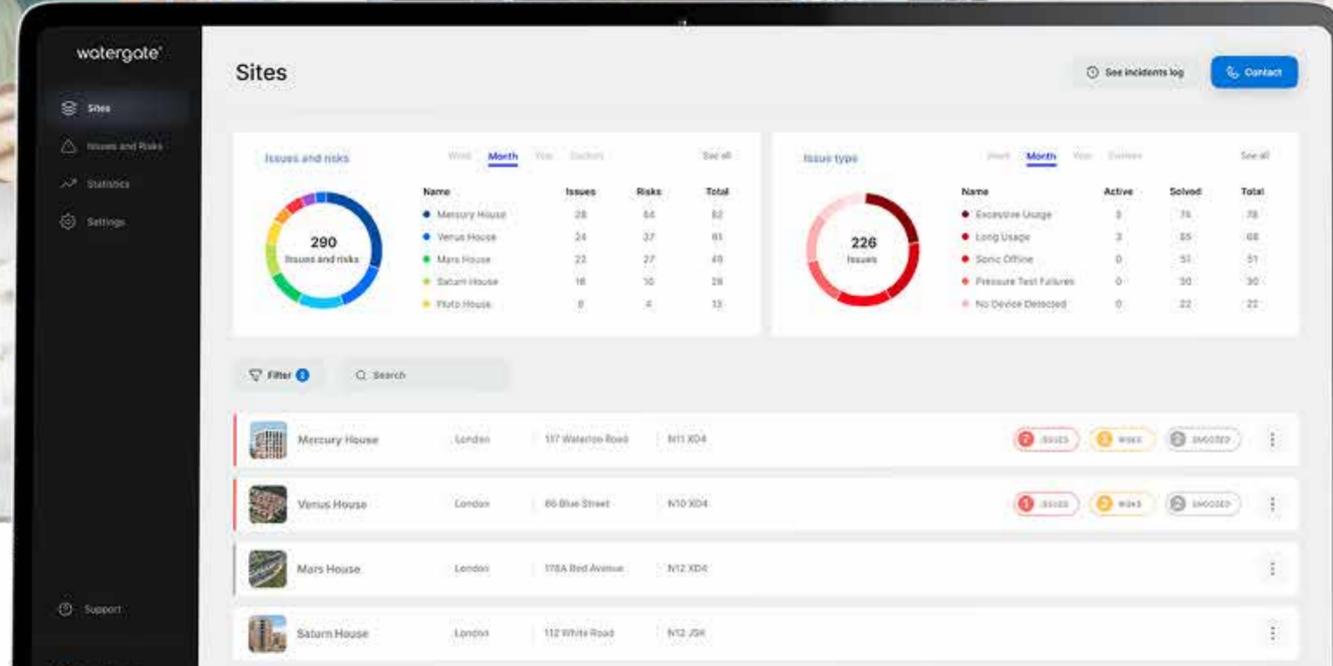

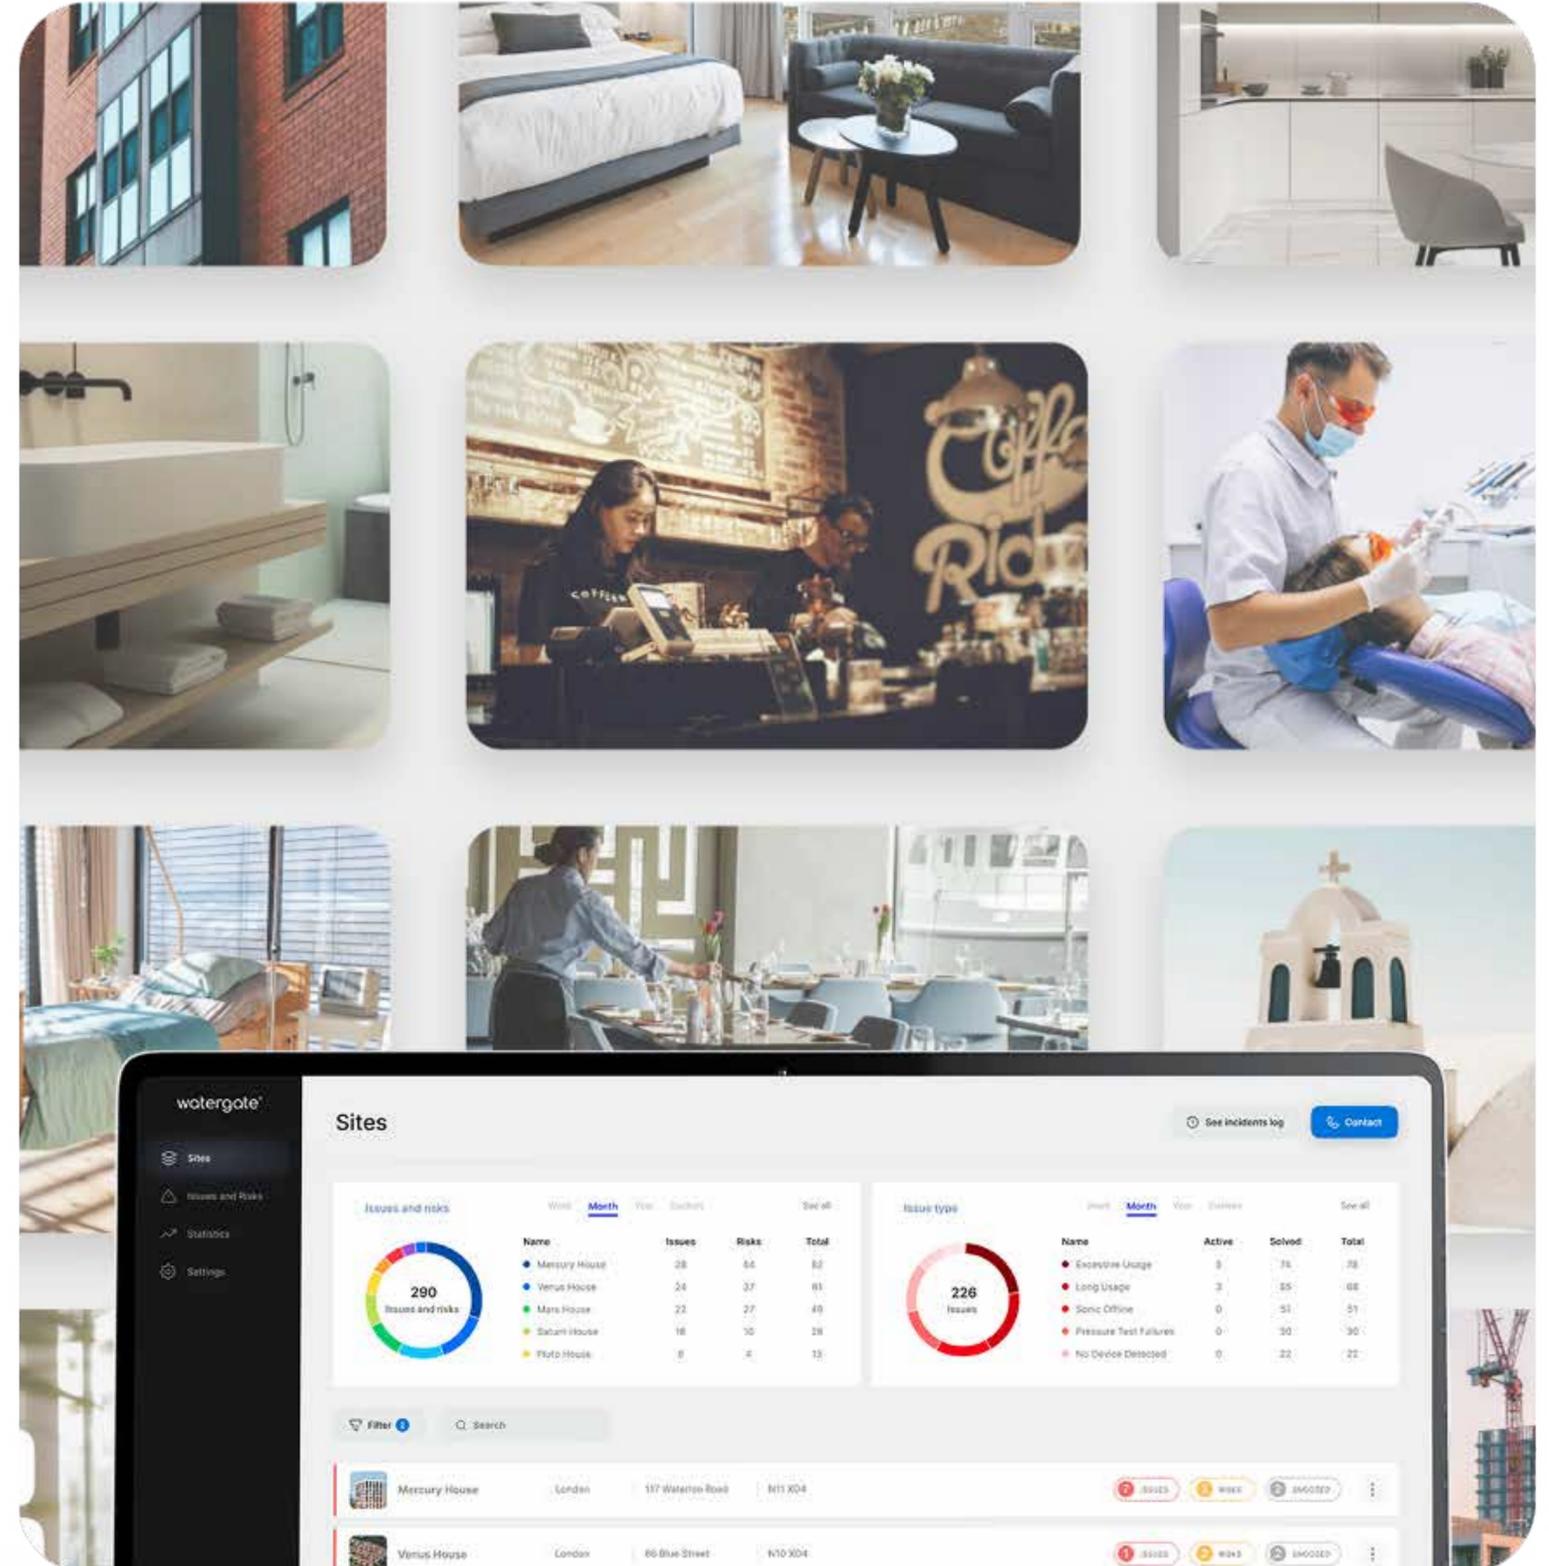

Monitor any number of properties at once from a single, unified **dashboard**.

Empower maintenance teams to **detect and fix** small leaks before they become big problems.

Safeguard occupants by monitoring for the conditions that allow deadly **Legionella bacteria** to multiply.

Water is dirtier than you think

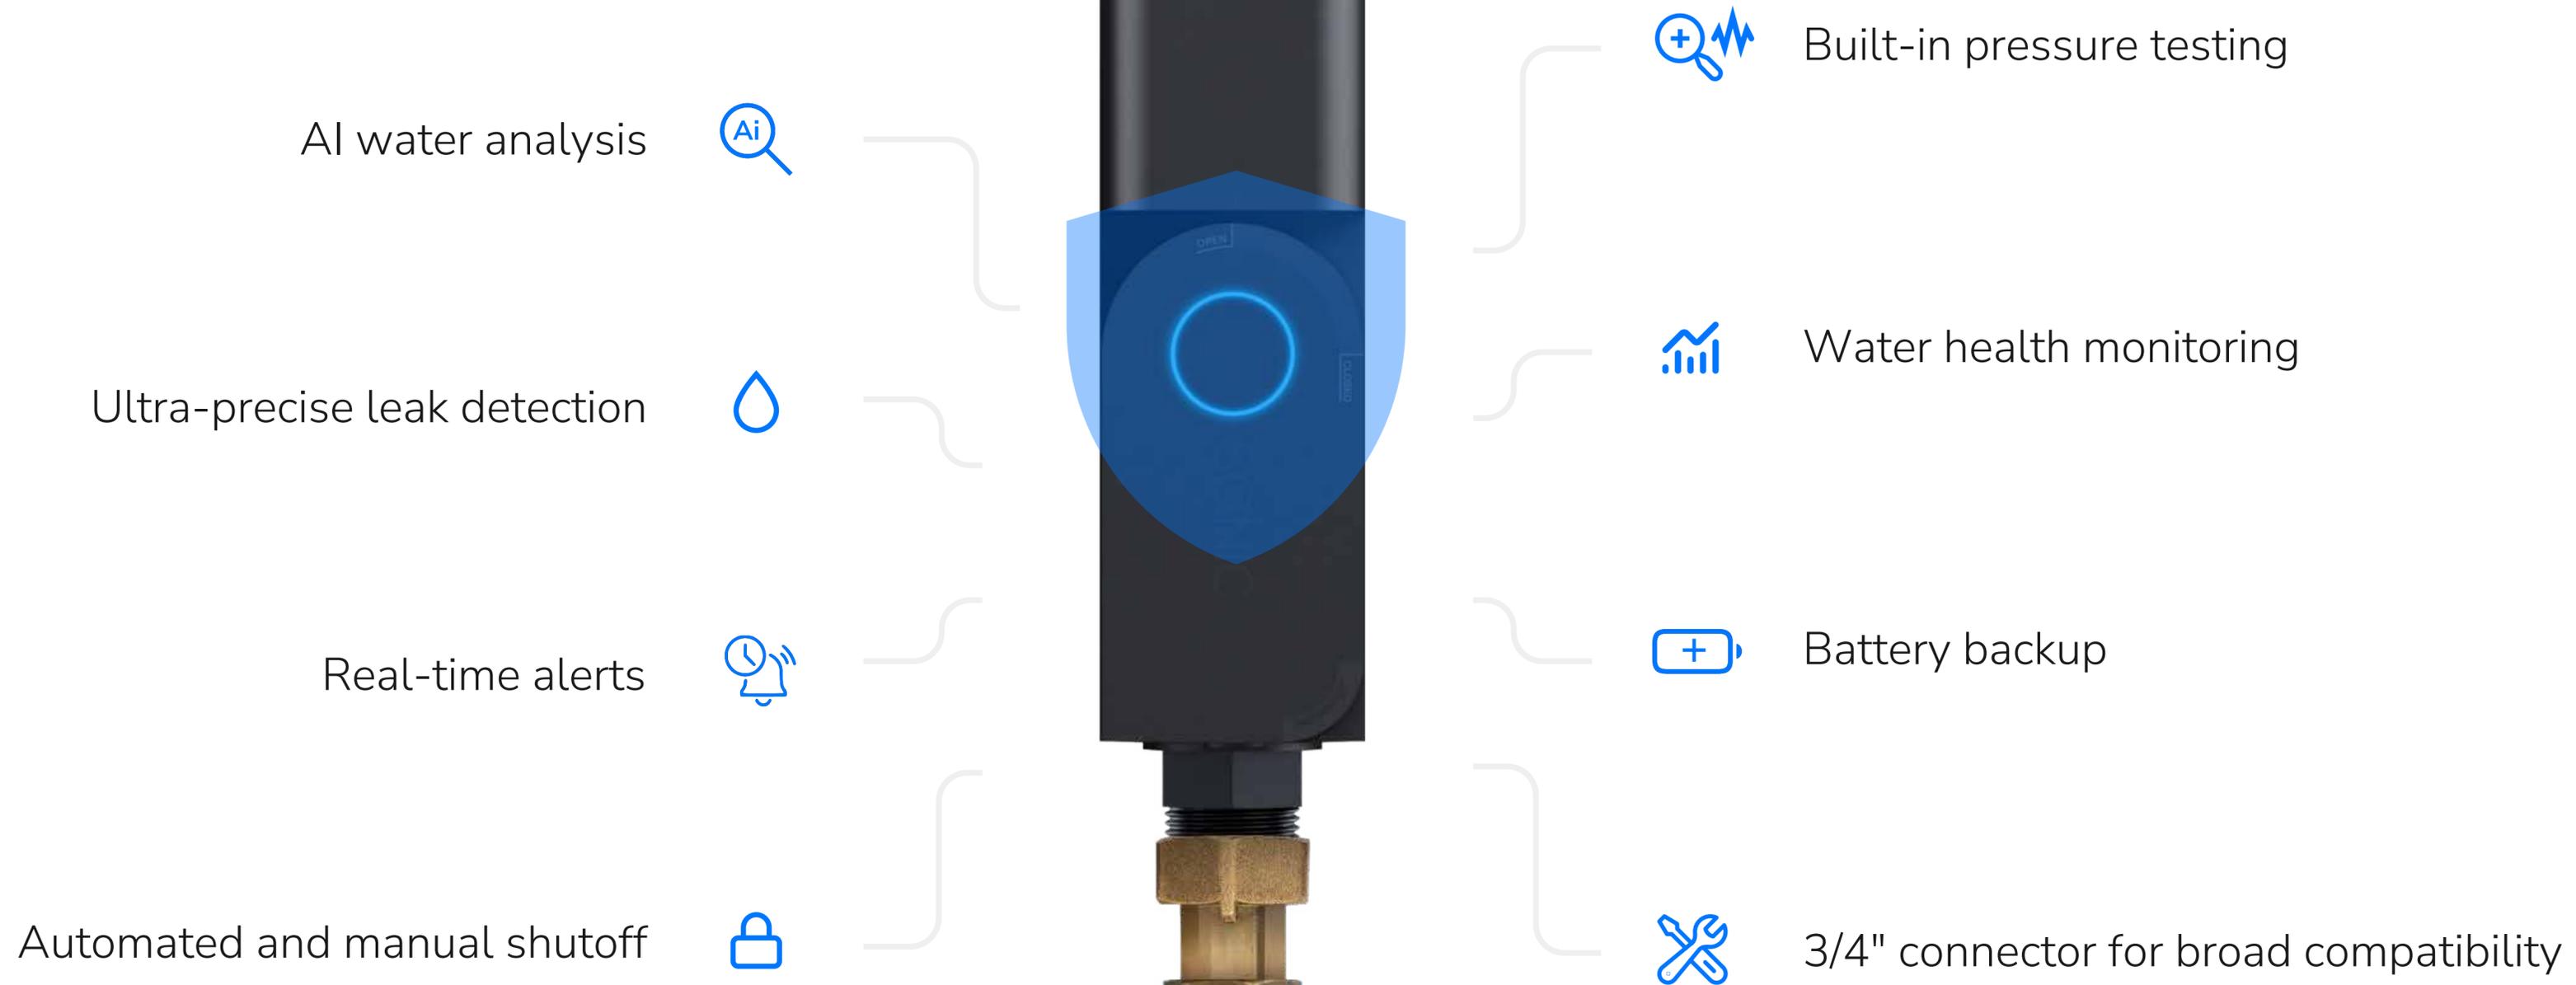

Each cubic meter of tap water creates as much CO₂e as burning **4.4 litres of petrol**.

The weekly water consumption of a **10-person** office produces the same CO₂e as **1,915** single-use plastic bags

Saving water is saving carbon.

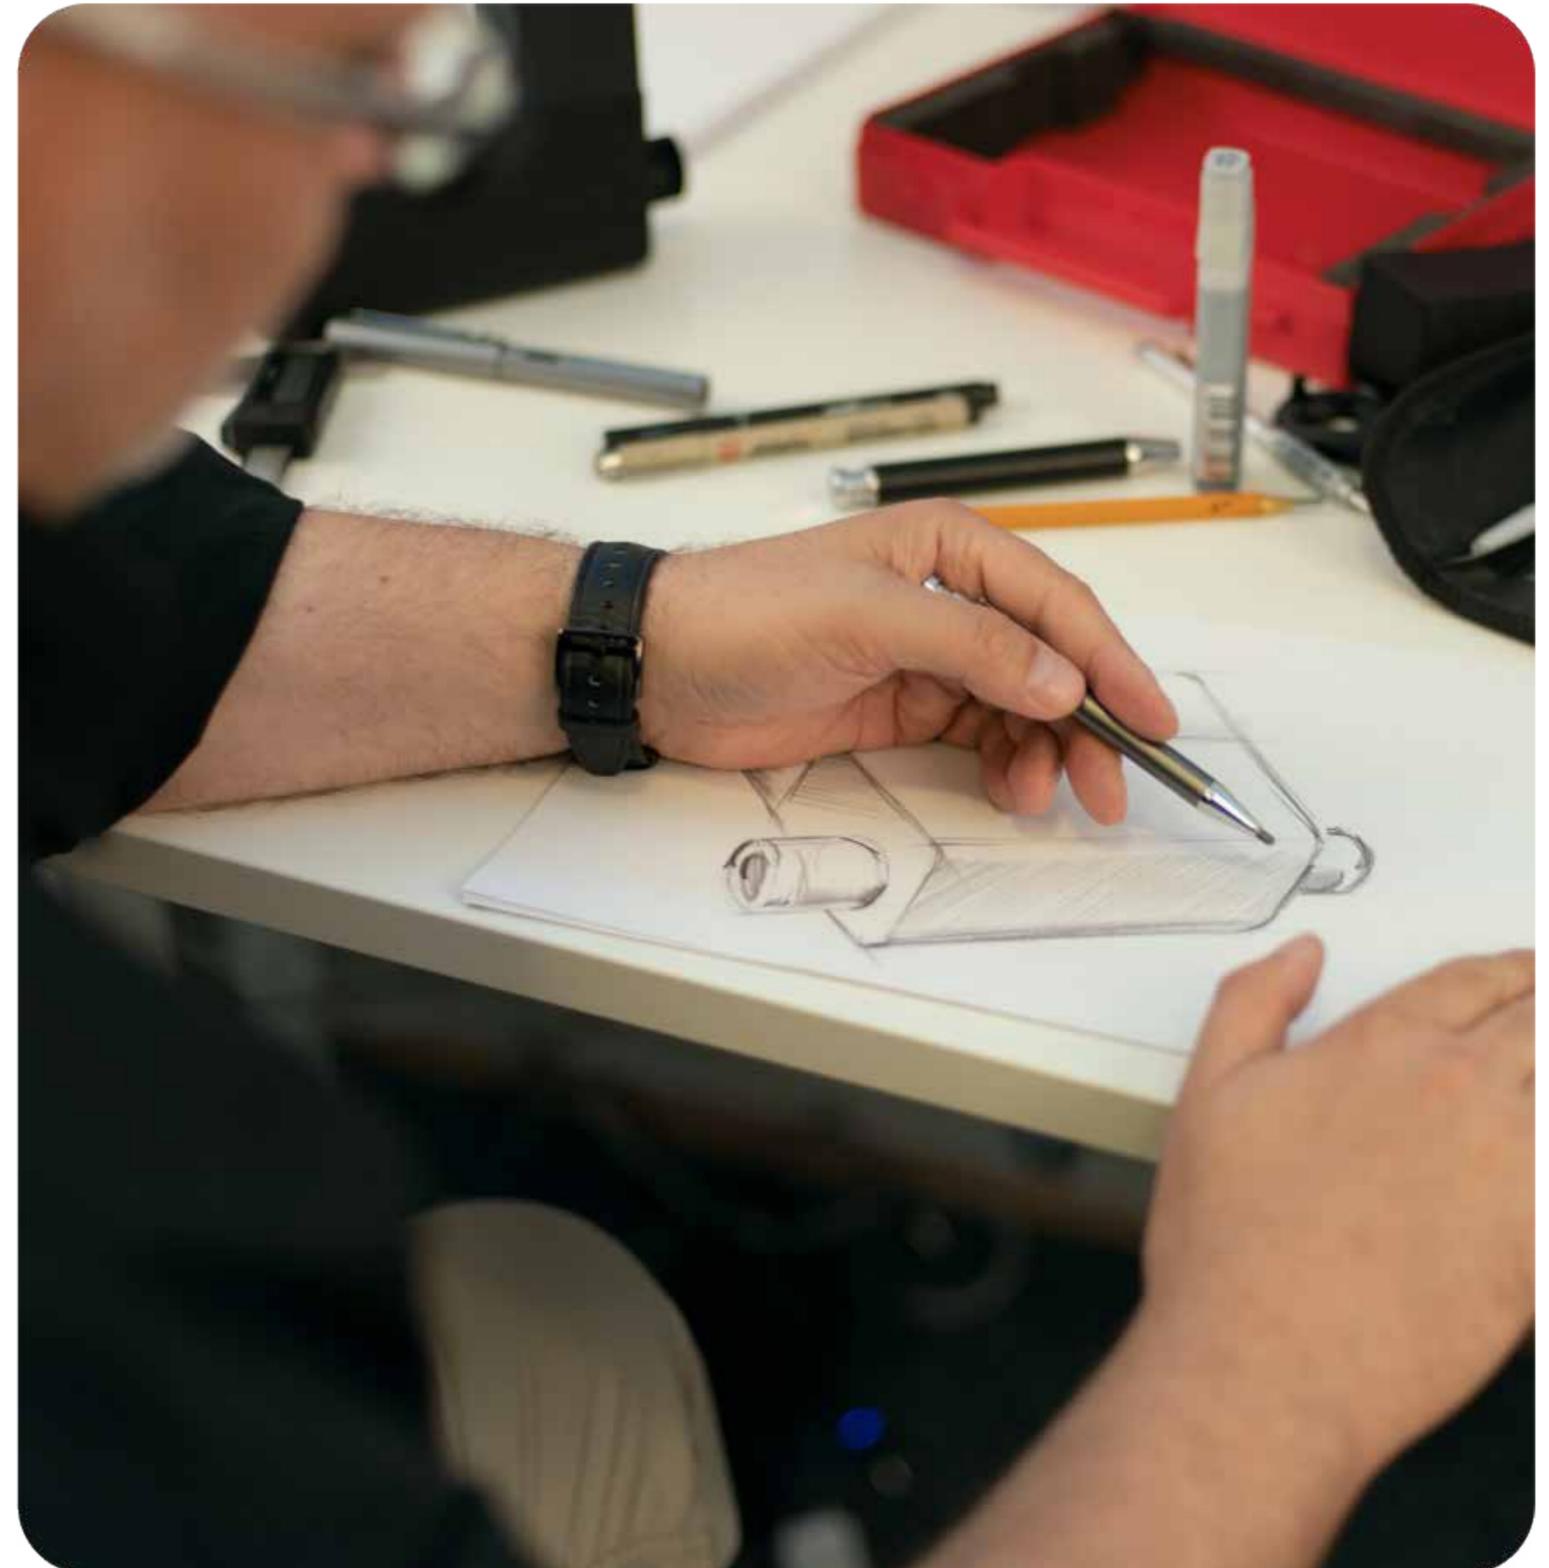

Benefits of Watergate

Engineering expertise

Watergate is the product of multiple years of research and development by world-class data scientists, machine learning experts and engineers.

We are a design and engineering-led business comprised of seasoned Proptech, Insurtech and IoT veterans.

Trusted by users and leading companies

“Just turned off my water at home from the comforts of my bed in sunny Spain.”

“Really impressed with the accuracy of the Sonic.”

“I woke up to a Sonic "drip alert" yesterday. Checked the house, couldn't find any leaky taps. Woke this morning to find where the drip was coming from.”

“Missed 4 calls from Sonic this morning and the water was automatically shut-off. Turns out it was a tap left on by the kids before we went out. So grateful Sonic works flawlessly!”

“Thank you Watergate Team for identifying something before it got worse!”
